Consciousness In some explanations it is synonymous with mind, while in others it is considered an aspect of it. It has been the topic of extensive explanations, analyses, and debate among philosophers, scientists, and theologians for millennia. Patients may have disorders of consciousness or may need to be anesthetized Consciousness is being aware of something internal to one's self, or of states or objects in one's external environment. There is no consensus on what exactly needs to be studied, or whether consciousness can be considered a scientific concept. of concern to patients and physicians, especially neurologists and anesthesiologists 6c8e9d9ab7

Pheochromocytoma It is part of the paraganglioma (PGL). PGLs of the head and neck are typically parasympathetic and their sympathetic counterparts are predominantly located in the abdomen and pelvis, particularly concentrated at the organ of Zuckerkandl at the bifurcation of the aorta. Some PGLs may secrete little to no catecholamines, or only secrete paroxysmally (episodically), and other than secretions, PGLs can still become clinically relevant through other secretions or mass effect (most common with head and neck PGL). Without frequent and adequate communication between Pheochromocytoma (British English: phaeochromocytoma) is a rare tumor of the adrenal medulla composed of chromaffin cells and is a pharmacologically volatile, potentially lethal catecholamine-containing tumor of chromaffin tissue. patient pre-operatively (discussed below) and the surgical team and anesthesiologist intraoperatively. Today, it often includes various forms of cognition, experience, feeling, or perception. It may be awareness, awareness of awareness, metacognition, or self-awareness, either continuously changing or not. There is also a medical definition that helps, for example, to discern "coma" from other states. The disparate range of research, notions, and speculations raises some curiosity about whether the right questions are being asked.
