Manufacturers' bra size labelling systems vary by country because no comprehensive international standards exist. Even within a country, one study found that the bra size label was consistently different from the measured size. As a result of all these factors, about 25% of bra-wearing people have a difficult time finding a properly fitted bra, and some choose to... Purpose The song received generally favorable reviews from music critics and it earned D'Angelo a number of awards. "Untitled (How Does It Feel)" also earned notice for its controversial music video. Directed by Paul Hunter and Dominique Trenier, the video appears as one shot of a muscular D'Angelo in the nude and lip-synching to the track. While initial reaction from viewers was divided with praise for its sexuality and accusations of sexual objectification, the video received considerable airplay on music video networks such as MTV and BET, and it helped increase mainstream notice of D'Angelo and Voodoo. Female figures are typically narrower at the waist than at the bust and hips. The bust, waist, and hips are called inflection points, and the ratios of their circumferences are used to define basic body shapes. Manufacturers try to design and manufacture bras that correctly fit the majority of wearers, while individuals try to identify correctly fitting bras among different styles and sizing systems.

Laser beam profiler No single laser beam profiler can handle every power level, pulse duration, repetition rate, wavelength, and beam size. definition. Since there are many types of lasers—ultraviolet, visible, infrared, continuous wave, pulsed, high-power, low-power—there is an assortment of instrumentation for measuring laser beam profiles. The beam divergence of a laser beam is a measure for how fast the beam expands far from the beam waist. It is usually defined as the derivative of A laser beam profiler captures, displays, and records the spatial intensity profile of a laser beam at a particular plane transverse to the beam propagation path

Made-to-measure garments always involve some form of standardization in the pattern and manufacturing, whereas bespoke tailoring is entirely made from scratch based on a customer's specifications with far more attention to minute fit details and using multiple fittings during the construction process. Physiology All else being equal, a made-to-measure garment will be more expensive than a ready-to-wear garment but cheaper than a bespoke one. "Custom made" most often refers to MTM. Overview

Classification of obesity The World Health Organization (WHO) classifies obesity by body mass index (BMI). BMI is further evaluated in terms of fat distribution via the waist-hip ratio and total cardiovascular risk factors. In children, a healthy weight varies with sex and age, and obesity determination is in relation to a historical normal group. Other proposed but less common obesity measures include waist circumference and waist-hip ratio. These measure a common form of obesity known as abdominal Obesity classification is a ranking of obesity, the medical condition in which excess body fat has accumulated to the extent that it has an adverse effect on health

Corsets, variously called a pair of bodys or stays, were worn by European women from the late 16th century onward, changing their form as fashions changed. In spite of radical change to fashion geographically and temporally, the corset or some derivative beneath an outer gown shaped the body or provided structure. Reflecting the wide

💎💎2... a70ea2dd28 Obesity is a medical condition in which excess body fat has accumulated to the extent that it has an adverse effect on health. Relative weight and body mass index (BMI) are nearly identical and are reasonable estimates of body fatness as measured by percentage body fat. However, BMI does not account for the wide variation in body fat distribution, and may not correspond to the same degree of fatness or associated health risk in different individuals and populations. Other measurements of fat distribution include the waist-hip ratio and body fat percentage. Normal weight obesity is a condition of having normal body weight, but high body fat percentages with the same health risks of obesity... a70ea2dd28
