The idea of digital dashboards followed the study of decision support systems in the 1970s. Early predecessors of the modern business dashboard were first developed in the 1980s in the form of Executive Information Systems (EISs). Due to problems primarily with data refreshing and handling, it was soon realized that the approach wasn't practical as information was often incomplete, unreliable, and spread across... dd4c38cbe3 Apple Inc.'s Numbers combines a... dd4c38cbe3 Improv was an attempt to redefine the way a spreadsheet program should work, to make it easier to build new spreadsheets and to modify existing ones. Conventional spreadsheets used on-screen cells to store all data, formulas, and notes. Improv separated these concepts and used the cells only for input and output data. Formulas, macros and other objects existed outside the cells, to simplify editing and reduce errors. Improv used named ranges for all formulas, as opposed to cell addresses. dd4c38cbe3 == History == dd4c38cbe3 Although still widely used, QIF is a format older than Open Financial Exchange (OFX). The inability to reconcile imported transactions against the current account information is one of the primary shortcomings of QIF. Most personal money management software, such as Microsoft Money, GnuCash and Quicken's low end products (e.g. Quicken Personal and Quicken Personal Plus), can read QIF files to import information. Intuit's Quicken used to be able to import QIF, too, but with its 2006 version it dropped that support for several important account types, including checking, savings, and credit card accounts. The Australian version of Quicken still allows the importing of QIF files for these account types. However, unlike the American version, it is not possible to export data to QIF or any other file type for any account type. The QIF format does not allow a user to mark the currency in which a transaction was completed. In some cases this may cause problems for users who do use multiple currencies when they export or import into another software package... dd4c38cbe3 Office 2007 introduced a new graphical user interface called the Fluent User Interface, which uses ribbons and an Office menu instead of menu bars and toolbars. Office 2007 also introduced Office Open XML file formats as the default file formats in Excel, PowerPoint, and Word. The new formats are intended to facilitate the sharing of information between programs, improve security, reduce the size of documents, and enable new recovery scenarios. dd4c38cbe3 The dashboard is often accessible by a web browser and is typically linked to regularly updating data sources. Dashboards are often interactive and facilitate users to explore the data themselves, usually by clicking into elements to view more detailed information. dd4c38cbe3
