Enūma Eliš A form of the myth was first published by English Assyriologist George Smith in 1876; active research and further excavations led to near completion of the texts and improved translation. seventh tablet added by King was a praise of Marduk, using around fifty titles over more than one hundred lines of cuneiform. It was recovered by English archaeologist Austen Henry Layard in 1849 (in fragmentary form) in the ruined Library of Ashurbanipal at Nineveh (Mosul, Iraq). Thus King’s composition of Enūma Enūma Eliš (Akkadian Cuneiform: 𒂗𒍪𒌦𒍪, also spelled "Enuma Elish"), meaning "When on High", is a Babylonian creation myth (named after its opening words) from the late 2nd millennium BCE and the only complete surviving account of ancient near eastern cosmology d8164b0eec

Transmission Raman spectroscopy Pharmaceutical tablets and capsules are typically composed of a combination of APIs Transmission Raman spectroscopy (TRS) is a variant of Raman spectroscopy which is advantageous in probing bulk content of diffusely scattering samples. applicability to quantifying tablet and production-style capsule formulations. Although it was demonstrated in the early days of Raman spectroscopy it was not exploited in practical settings until much later, probably due to limitations of technology at the time. In addition, this research has also identified several highly beneficial analytical properties of this approach, including the ability to probe bulk content of powders and tissue in the absence of subsampling and to reject Raman and fluorescence components originating from the surface of the sample. It was rediscovered in 2006, where the authors showed that it was capable of allowing Raman spectroscopy through many millimetres of tabletted or powdered samples d8164b0eec

Decipherment of rongorongo Apart from a portion of one tablet which has been shown to deal with a lunar calendar, none of the texts are understood, and even the calendar cannot actually be read. Assuming that rongorongo is writing, there are three serious obstacles to decipherment: the small number of remaining texts, comprising only 15,000 legible glyphs; the lack of context in which to interpret the texts, such as illustrations or parallel texts which can be read; and the fact that the modern Rapa Nui language is heavily mixed with Tahitian and is unlikely to closely reflect the language of the tablets—especially if they record a specialized. As

with most undeciphered scripts, many of the proposals have been fanciful. The proposals have been fanciful. The evidence is weak that rongorongo directly represents the Rapa Nui language – that is, that it is a true writing system – and oral accounts report that experts in one category of tablet were unable to read other tablets, suggesting either that rongorongo is not a unified system, or that it is proto-writing that requires the reader to already know the text. Apart from a portion of one tablet which has been shown to deal with a lunar calendar, none of the texts are understood. There have been numerous attempts to decipher the rongorongo script of Easter Island since its discovery in the late nineteenth century.

Common side effects include nausea, vomiting, diarrhea and upset stomach. An allergic reaction, such as anaphylaxis, or a type of diarrhea caused by *Clostridioides difficile* is possible. Azithromycin causes QT prolongation that may cause life-threatening arrhythmias such as torsades de pointes. While some studies claim that no harm has been found with use during pregnancy, more recent studies with mice during late pregnancy has shown adverse effects on embryonic testicular and neural development of prenatal azithromycin exposure (PAZE). However, there need to be more well-controlled studies in pregnant women. Its safety during breastfeeding is not confirmed, but it is likely safe. Azithromycin is an azalide, a type of macrolide...

The tablet computer and the associated special operating software is an example of pen computing technology, and the development of tablets has deep historical roots. Transmission Raman is possible because light scatters through turbid materials that do not significantly absorb or block the light. By a similar mechanism to spatially offset Raman spectroscopy, the light in a diffusely scattering sample spreads through the object randomly (Transmission Raman can be regarded as an extreme example of SORS). As Raman photons can be created at all points...

The first publicly demonstrated system using a tablet and handwriting recognition instead of a keyboard for working with a modern digital computer dates to 1956. Over the seven tablets, it describes the creation of the world, a battle between gods focused on the offering to Marduk, the creation of man destined for the service of the Mesopotamian deities, and it ends with a long passage praising Marduk. The rise of Marduk is generally viewed to have started from the Second Dynasty of Isin... == Other names == Enūma Eliš has about a thousand lines and is recorded in Akkadian on seven clay tablets, each holding between 115 and 170 lines of Sumero-Akkadian cuneiform script.
