Cost-plus contracts were first used by the government in the United States during World War I to encourage wartime production by American businesses. According to Martin Kenney, after World War II they "allowed what were then small technology firms like Hewlett-Packard and Fairchild Semiconductor to charge the Department of Defense for the price of research and development that none could pay on its own. This enabled the firms to create technology products that eventually created entire new markets and economic sectors". bf81d5a740

Sunk cost In other words, a sunk cost is a sum paid in the past that should no longer be relevant to decisions about the future. Even though economists argue that sunk costs are no longer relevant to future rational decision-making, people in everyday life often take previous expenditures in situations, such as repairing a car or house, into their future decisions regarding those properties. In economics and business decision-making, a sunk cost (also known as retrospective cost) is a cost that has already been incurred and cannot be recovered In economics and business decision-making, a sunk cost (also known as retrospective cost) is a cost that has already been incurred and cannot be recovered. Sunk costs are contrasted with prospective costs, which are future costs that may be avoided if action is taken bf81d5a740

The term originated within the airline industry referring to airlines with a lower operating cost structure than their competitors. The term is often applied to any carrier with low ticket prices and limited services regardless of their operating models. Low-cost carriers should not be confused with regional airlines that operate short-haul flights without service, or with full-service airlines offering some reduced fares. bf81d5a740 Some airlines advertise themselves as low-cost while maintaining products usually associated with traditional mainline carriers' services. These products include preferred or assigned seating, catering, differentiated premium cabins, satellite or ground-based Wi-Fi internet, and in-flight audio and video entertainment. The term ultra-low-cost carrier (ULCC) has been used, particularly in North America... bf81d5a740 While all in the UK are affected by rising prices, the crisis most substantially affects people living in poverty. The British government has responded with measures including grants, tax rebates, and subsidies to electricity and gas suppliers. Regular pay began to outpace inflation beginning in May 2023, but living costs have remained at elevated levels, and have continued to increase faster than headline inflation into 2025. The Joseph Rowntree Foundation projected in 2025 that disposable incomes would continue to decline for the rest of the decade. bf81d5a740 == Cost metrics == bf81d5a740 Frank B. Gilbreth, one of the early developers of industrial engineering, used "cost-plus-a-fixed sum" contracts for his building contracting business. Depending on the local regulatory environment, some or

all wholesale costs may be passed through to consumers. These are costs per unit of energy, typically represented as dollars/megawatt hour (wholesale). The calculations also assist governments in making decisions regarding energy policy. According to Globalissues.org, "Almost half the world—over three billion people—live on less than US\$2.50 a day." This statistic includes children. The calculation of the cost to raise a child in developing countries is difficult, since families often do not operate with currency, but barter or trade to provide for their children. It is argued that in developing areas the balance between earnings and costs of having children is changing, because the mean number of children per couple in many developing areas has decreased... Bygone's principle == On average the levelized cost of electricity from utility scale solar power and onshore wind power is less than from coal and gas-fired power stations, but this varies greatly by location. Definition == a systematic set of procedures for recording and reporting measurements of the cost of manufacturing goods and performing services in the aggregate and in detail. It includes methods for recognizing, allocating, aggregating and reporting such costs and comparing them with standard costs. Since costs and advantages are usually considered in terms of environmental, economic and social impacts, full or true cost efforts are collectively called the "triple bottom line". Many standards now exist in this area including Ecological Footprint, eco-labels, and the International Council for Local Environmental Initiatives' approach to triple bottom line using the ecoBudget metric. The International Organization for Standardization (ISO) has several accredited standards useful in FCA or TCA including for greenhouse gases, the ISO 26000 series for corporate social responsibility coming in 2010, and the ISO 19011 standard for audits including all these. Environmental full-cost accounting It is one aspect of true cost accounting (TCA), along with Human capital and Social capital. Environmental full-cost accounting (EFCA) is a method of cost accounting that traces direct costs and allocates indirect costs by collecting and presenting Environmental full-cost accounting (EFCA) is a method of cost accounting that traces direct costs and allocates indirect costs by collecting and presenting information about the possible environmental costs and benefits or advantages - in short, about the "triple bottom line" - for each proposed alternative. As definitions for "true" and "full" are inherently subjective, experts consider both terms problematic

According to classical economics and standard microeconomic theory, only prospective (future) costs are relevant to a rational decision. At any moment in time, the best thing to do depends only on current alternatives. The only things that matter are the future consequences. Past mistakes are irrelevant. Any costs incurred prior to making the decision have already been incurred no matter what decision is made. They may be described as "water under the bridge", and making decisions on their basis may be described as "crying..."
