List of eponymous medical signs This list includes other eponymous entities of diagnostic significance, such as tests and reflexes. pancreatitis Curschmann spirals Heinrich Curschmann pulmonology asthma spiral mucus plugs found in sputum Cushing's triad Harvey Cushing neurology raised intracranial Eponymous medical signs are those that are named after a person or persons, usually the physicians who first described them, but occasionally a famous patient

17β-Dihydroequilenin Different types of discharge are described. Generally "rectal discharge" refers to either a mucous or purulent discharge, but, depending upon what definition of rectal discharge is used, the following could be included:

Amoebic brain abscess However Amoebic brain abscess is an affliction caused by the anaerobic parasitic protist *Entamoeba histolytica*. It is extremely rare; the first case being reported in 1849. Brain abscesses resulting from *Entamoeba histolytica* are difficult to diagnose and very few case reports suggest complete recovery even after the administration of appropriate treatment regimen. in the terminal ileum region, they colonize the large bowel, remaining on the surface of the mucus layer and feeding on bacteria and food particles

16α-Hydroxyestrone 1629–31 Italian plague 17β-Aminoestrogen AIDS-related lymphoma 2009 flu pandemic tables 2009 flu pandemic in Canada "article title the suggestion was for", Human feces have similarities to the feces of other animals and varies significantly in appearance (i.e. size, color, texture), according to the state of the diet, digestive system, and general health. Normally, human feces are semisolid, with a mucus coating. Small pieces of harder, less moist feces can sometimes be seen impacted in the distal (final or lower) end. This is a normal occurrence when a prior bowel movement is incomplete, and feces are returned from the rectum to the large intestine, where water is further absorbed. 2009 flu pandemic in Brazil 17α-Methylprogesterone 1788 Doctors' riot 1817–24 cholera pandemic 1847 North American typhus epidemic == Types == 13q deletion syndrome 5-HT2c receptor agonist ATC code N02 Human feces together with human urine are collectively called human waste... It is used to filter newly created lists of suggestions to make sure they are not suggested again. 2009 flu pandemic in Taiwan 1% rule (aviation medicine) 5-alpha-reductase inhibitor == Articles == The term "failure to thrive" has been used in different ways, as no single objective standard or universally accepted definition exists for when to diagnose FTT. One definition describes FTT as a fall in one or more weight centile spaces on a World Health Organization (WHO) growth chart depending on birth weight or when weight is below the 2nd percentile of weight for age irrespective of birth weight. Another definition of FTT is a weight for age that is consistently below the fifth percentile or weight for age that falls by at least two major percentile lines on a growth chart. While weight loss after birth is normal and most babies return to their birth weight by three weeks of age, clinical assessment for FTT is recommended for babies who lose more than 10% of their birth weight or do not return to their birth weight after three weeks. Failure to thrive is not a specific... 16α-Iodo-E2 1852–60 cholera pandemic ACTH stimulation test 16β,17α-Epiestriol (S,S)-Tetrahydrochrysene In infants, the Apt test, a test that is particularly useful in cases where a newborn has blood

in stool or vomit, can be used to distinguish fetal hemoglobin from maternal blood based on the differences in composition of fetal hemoglobin as compared to the hemoglobin found in adults. Blood in stool The term "blood in stool" is usually only used to describe visible blood, and not fecal occult blood, which is found only after physical examination and chemical laboratory testing. gut wall is important for the movement of waste products through the GI tract. Evaluation of the blood found in stool depends on its characteristics, in terms of color, quantity and other features, which can point to its source, but more serious conditions can present with a mixed picture, or with the form of bleeding that is found in another section of the tract. Repetitive attempts to have a bowel movement can lead to tearing around the Blood in stool looks different depending on how early it enters the digestive tract—and thus how much digestive action it has been exposed to—and how much there is. The term can refer either to melena, with a black appearance, typically originating from upper gastrointestinal bleeding; or to hematochezia, with a red color, typically originating from lower gastrointestinal bleeding 500ef4b4b7

5-alpha-reductase deficiency 500ef4b4b7 The onset of symptoms is very abrupt and the disease progression is very rapid. Hence finding the root cause of the symptoms is very important as failing to do so, could result in imminent death. Signs and symptoms include: 500ef4b4b7 (S)-Equol 500ef4b4b7

Rectal discharge Rectal discharge has many causes, and may present with other symptoms: Rectal discharge is intermittent or continuous expression of liquid from the anus (per rectum). Otherwise, this is closely related to types of fecal incontinence (e. Types of fecal incontinence that produce a liquid leakage could be thought of as a type of rectal discharge. Normal rectal mucus is needed for proper excretion of waste. discharge is passage of mucus or pus wrapped around an otherwise normal bowel movement. , fecal leakage) but the term rectal discharge does not necessarily imply degrees of incontinence. g 500ef4b4b7

Failure to thrive FTT is usually defined in terms of weight, and can be evaluated either by a low weight for the child's age, or by a low rate of increase in the weight. disease, can present with abdominal symptoms. Symptoms can include abdominal pain, abdominal distention, hyperactive bowel sounds, bloody stools, or diarrhea Failure to thrive (FTT), also known as weight faltering or faltering growth, indicates insufficient weight gain or absence of appropriate physical growth in children 500ef4b4b7

The most common cause is an infection of the intestines due to a virus, bacterium, or parasite—a condition also known as gastroenteritis. These infections are often acquired from food or water that has been contaminated by feces, or directly from another person who is infected. The three types of diarrhea are: short duration watery diarrhea, short duration bloody diarrhea, and persistent diarrhea (lasting more than two weeks, which can be either watery or bloody). The short duration watery diarrhea may be due to cholera, although this is rare in the developed world. If blood is present, it is also known as dysentery... 500ef4b4b7

Human feces This is a normal occurrence when a prior bowel movement is incomplete, and feces are returned from the rectum to the large intestine Human feces (American English) or faeces (British English), commonly and in medical literature more often called stool, commonly referred to as poo or poop, are the solid or semisolid remains of food that could not be digested or absorbed in the small intestine of humans, but has been further broken down by bacteria in the large intestine. distal (final or lower) end. It is discharged through the anus during a process called defecation. It also contains bacteria and a relatively small amount of metabolic waste products such as bacterially altered bilirubin, and the dead epithelial cells from the lining of the gut 500ef4b4b7
