Adapalene It is also chemically more stable compared to the other two retinoids, allowing it to be used in combination with benzoyl peroxide. It also has several advantages over other retinoids. increased. Due to its effects on keratinocyte proliferation and differentiation, adapalene is superior to tretinoin for the treatment of comedonal acne and is often used as a first-line agent. Application of adapalene gel to the skin 3–5 minutes before application of clindamycin enhances penetration of clindamycin into the skin, which Adapalene, sold under the brand name Differin among others, is a third-generation topical retinoid primarily used in the treatment of mild-moderate acne, and is also used off-label to treat keratosis pilaris as well as other skin conditions. Studies have found adapalene is as effective as other retinoids, while causing less irritation. The Swiss company Galderma developed adapalene. The adapalene molecule is more stable compared to tretinoin and tazarotene, which leads to less concern for photodegradation 7056f9b65c
