7709a2712a The company was established in 1968 by French veterinary surgeon Jean Cathary, after he successfully treated a number of skin and coat conditions in dogs by

feeding them a cereal-based diet he prepared in his garage. He realized that nutrition was an important part of pets' health. After importing an extruder from the United States, a process first used in the pet food industry in 1956, the company was the first to manufacture dry pet food in France. Aimed primarily at breeders, production steadily increased and distribution expanded across the European market. Royal Canin was sold to the Guyomarc'h Group in 1972, and underwent a further period of expansion, especially in the area of research and development, before being purchased by the Paribas Affaires Industrielles (PAI) in 1990. The company was floated on the French stock exchange but delisted later after it was sold to Mars, Incorporated in 2002. 7709a2712a The... 7709a2712a In the United States, Sominex is marketed by Prestige Brands, sometimes

Lactose intolerance is due to the lack of the enzyme lactase in the small intestines to break lactose down into glucose and galactose. There are four types: primary, secondary, developmental, and congenital. Primary lactose intolerance occurs as the amount of lactase declines as people grow up. Secondary lactose intolerance is due to injury to the small intestine. Such injury could be

the result of infection, celiac disease, inflammatory bowel disease, or other diseases. Developmental lactose intolerance may occur in premature babies and usually improves over a short period of time. Congenital lactose intolerance is an extremely rare genetic disorder in which little... 7709a2712a Development of Zig-zag product of graphs, a method of combining smaller graphs to produce larger ones used in the construction of expander graphs by Avi Wigderson. 7709a2712a

While the condition may occur at any age, it typically begins in childhood, with varying severity over the years. In children under one year of age, the face, limbs,

and much of the body may be affected. As children get older, the areas on the insides of the knees and folds of the elbows and around the neck are most commonly affected. In adults, the hands and feet are commonly affected. Scratching the affected areas worsens the eczema and increases the risk of skin infections. Many people with atopic dermatitis develop hay fever or asthma.
