As a type of active management, it stands in contradiction to much of modern portfolio theory. It is distinguished from fundamental analysis, which considers a company's financial statements, health, and the overall state of the market and economy

The principles of technical analysis are derived from hundreds of years of financial market data. Some aspects of technical analysis began to appear in Amsterdam-based merchant Joseph de la Vega's accounts of the Dutch financial markets in the 17th century. In Asia, technical analysis is said to be a method developed by Homma Munehisa during the early 18th century which evolved into the use of candlestick techniques, and is today a technical analysis charting tool. Paul Levine's initial MIDAS work and the new MIDAS approaches developed in the book and other publications by Coles, Hawkins, and English have been taught at university level and are currently the subject of independent study intended for academic publication. The same MIDAS techniques have also been widely implemented as part of private trader and hedge fund strategies. The MIDAS curves and indicators developed by Levine, Coles, Hawkins, and English have also been commercially developed by an independent trading software company for the Ninja Trader trading platform, while individual curves and indicators have been officially coded by developers...
