The introduction likens the "cross-talk" occurring in the brain producing synesthetic experiences to weather patterns in coastal regions where there are no barriers and all of the elements interact. Normally communication in the brain is like weather in the Rocky Mountain regions, where weather can be isolated in one spot independent of weather systems close by. Chapter 1, "What color is Tuesday?", describes some of the early and still common resistance to the existence and study of synesthesia, and explains the fundamental characteristics necessary to "diagnose" synesthesia. The authors advocate the usefulness of introspective reports as they can later be useful in developing third-party tests... fe5b42c382
