Consider a power plant running on petroleum. The fuel has a certain amount of chemical energy and it produces a certain amount of electrical energy. How would I find an estimate for its efficiency? (It doesn't have to be very accurate, I just want to compare it to the efficiency of a car's engine... which I also haven't estimated yet. All I've got so far is the thermodynamic efficiency based on temperature of the furnace versus ambient temperature and I don't think that is going to be a good estimate.) Thank you. In the United States, 90% of allergic responses to foods are caused by eight foods, including cow's milk. Recognition that a small number of foods are responsible for the majority of food allergies has led to requirements to prominently list these common allergens, including dairy, on food labels. One function of the immune system is to defend against infections by recognizing foreign proteins, but it should not overreact to food proteins. Heating milk proteins can cause them to become denatured, losing their three-dimensional configuration and allergenicity, so baked goods containing dairy products may be tolerated while fresh milk triggers an allergic reaction. The series was created by Larry David, who stars as a fictionalized version of himself. The series follows Larry in his life as a well-off, semi-retired television writer and producer in Los Angeles. Also starring are Cheryl Hines as his wife, Cheryl; Jeff Garlin as his best friend and manager, Jeff; Susie Essman as Jeff's wife, Susie; and J. B. Smoove as Larry's housemate,
