Fascist Italy had declared war and invaded Greece in October 1940, but had been pushed back by the Hellenic Army into neighbouring Albania, an Italian protectorate. While most of the Hellenic Army was located on the Albanian front against Italian counter-attacks, a rapid German campaign took place from April to June 1941, resulting in Greece being defeated and occupied. The Greek government went into exile, and an Axis collaborationist government was established in its place. Greece's territory was divided into occupation zones run by the Axis powers, with the Nazi Germans administering the most... 556eb19276

Combined oral contraceptive pills were first approved for contraceptive use in the United States in 1960, and remain a very popular form of birth control. They are used by more than 100 million women worldwide including about 9 million women in the United States. From 2015 to 2017, 12.6% of women aged 15-49 in the US reported using combined oral contraceptive

pills, making it the second most common method of contraception in this age range (female sterilization is the most common method). Use of combined oral contraceptive pills, however, varies widely by country, age, education, and marital status. For example, one third of women aged 16-49 in the United Kingdom use either... 556eb19276 Primates diverged from other mammals about 85 million years ago, in the Late Cretaceous period, with their earliest fossils appearing over 55 mya, during the Paleocene. Primates produced successive clades leading to the ape superfamily, which gave rise to the hominid and the gibbon families; these diverged some 15-20 mya. African and Asian hominids (including orangutans) diverged about 14 mya. Hominins (including the Australopithecine and Panina subtribes) parted from the Gorillini tribe between 8 and 9 mya; Australopithecine (including the extinct... 556eb19276

The general function of norepinephrine is to mobilize the brain and body for action. Norepinephrine release is lowest during sleep, rises during wakefulness, and reaches much higher levels during situations of stress or danger, in the so-called fight-or-flight response. In the brain, norepinephrine increases arousal and alertness, promotes vigilance, enhances formation and retrieval of memory, and focuses attention; it also increases restlessness and anxiety. In the rest of the body... 556eb19276

Human evolution Scientific American. Archived from Homo sapiens is a distinct species of the hominid family of primates, which includes all the great apes. ISSN 0036-8733. Over their evolutionary history, humans gradually developed traits such as bipedalism, dexterity, and complex language. Modern humans interbred with archaic humans, indicating that their evolution was not linear but weblike. The study of the origins of humans involves several scientific disciplines, including physical and evolutionary anthropology, paleontology, and genetics; the field is also known by the terms anthropogeny, anthropogenesis, and anthropogony—with the latter two sometimes used to refer to the related subject of hominization.
