

Homo Sapiens Evolution Timeline

The genus Homo is placed in the tribe Hominini alongside Pan (chimpanzees). The two genera are estimated to have diverged over an extended time of hybridization, spanning roughly 10 to 6 million years ago, with possible admixture as late as 4...

Homo floresiensis Bibcode:2012JHumE. "LB1 and LB6 Homo floresiensis are not modern human (Homo sapiens) cretins". 62 (2): 201–224. Brown, Peter (2012). Journal of Human Evolution da61a137e3

Timelines of Big History from the first appearance of Homo sapiens to before the invention of writing see: Timeline of prehistory These timelines of world history detail recorded da61a137e3

Timeline of human evolution The timeline of human evolution outlines the major events in the evolutionary lineage of the modern human species, Homo sapiens, throughout the history da61a137e3

Homo Sapiens 1900 Homo Sapiens 1900 is a 1998 Swedish documentary film directed by Peter Cohen, about various eugenics methods that were in practice in Europe during the da61a137e3

Human taxonomy The systematic genus, Homo, is designed to include both anatomically modern humans and extinct varieties of archaic humans. are classified as subspecies to Homo sapiens, differentiated, according to some, from the direct ancestor, Homo sapiens idaltu (with some other research Human taxonomy is the classification of the human species within zoological taxonomy. Current humans are classified as subspecies to Homo sapiens, differentiated, according to some, from the direct ancestor, Homo sapiens idaltu (with some other research instead classifying idaltu and current humans as belonging to the same subspecies) da61a137e3

Herto Man 000 and 100,000 years ago, obfuscating the evolution of "Homo (sapiens. By the time Herto Man was discovered, based.) rhodesiensis" into H. sapiens. s da61a137e3

Homo encompassing a single extant species, Homo sapiens (modern humans), along with a number of extinct species (e. g. Homo erectus and Homo neanderthalensis) classified da61a137e3

Since the introduction of systematic names in the 18th century, knowledge of human evolution has increased significantly, and a number of intermediate taxa have been proposed in the 20th and early 21st centuries. The most widely accepted taxonomy grouping takes the genus Homo as originating between two and three million years ago, divided into at least two species, archaic Homo erectus and modern Homo sapiens, with about a dozen further suggestions for species without universal recognition. da61a137e3

Homo rhodesiensis heidelbergensis. Other designations such as Homo sapiens arcaicus and H. A number of morphologically. sapiens rhodesiensis have also been proposed. synonym of H da61a137e3
