What distinguishes capital goods from intermediate goods (e.g., raw materials, components, energy consumed during production) is their durability and the nature of their contribution. Capital provides a flow of productive services over multiple cycles, facilitating production processes repeatedly, rather than being immediately consumed, physically incorporated, or transformed into the final output within a single cycle. While historically often focused on its physical manifestation in physical capital goods, the modern understanding explicitly includes non-physical assets as well. The term "capital equipment" is often used interchangeably with "capital goods", and refers especially to significant, durable items—such...
