The militarization of law enforcement is also associated with intelligence agency-style information gathering aimed at the public and political activists and with a more aggressive style of law enforcement. This includes the use of armored personnel carriers (APCs), assault rifles, submachine guns, flashbang grenades, sniper rifles, and SWAT (special weapons and tactics) teams. Criminal justice professor Peter Kraska has defined militarization of police as "the process whereby civilian police increasingly draw from, and pattern themselves around, the tenets of militarism and the military model" 4caed3710b

David Hume 255. org. Following John Locke, Hume rejected the existence of innate ideas, holding that all our ideas derive ultimately from impressions, but in his fork he distinguished relations of ideas, known a priori, from matters of fact, whose knowledge rests on experience. This places him in the empiricist tradition of Locke and George Berkeley, while drawing his experimental method from Francis Bacon. Ariadne was first synthesized... The drug is a serotonin 5-HT2 receptor partial agonist, including of the serotonin 5-HT2A receptor, similarly to psychedelics. However, Ariadne is not hallucinogenic in humans, but is still psychoactive, producing antidepressant and mild stimulant effects such as feelings of well-being and mental alertness. The drug shows dopaminergic actions in animals, such as increased motivation and reversal of parkinsonism, which may be mediated by serotonin 5-HT2A receptor activation-induced dopamine release in the brain. It is thought that the non-psychedelic nature of Ariadne with retained psychoactive effects is due to reduced but still high efficacy at the serotonin 5-HT2A receptor relative to psychedelics.
