

Lungs Affected By Smoking

== Smoking before pregnancy == d5b7a1cc25

Smoking and pregnancy A number of studies have shown that tobacco use is a significant factor in infertility and miscarriages among pregnant smokers, and that it contributes to a number of other threats to the health of the foetus. A number Tobacco smoking during pregnancy causes many detrimental effects on health and reproduction, in addition to the general health effects of tobacco. Tobacco smoking during pregnancy causes many detrimental effects on health and reproduction, in addition to the general health effects of tobacco d5b7a1cc25

Because of the associated risks, people are advised not to smoke before, during or after pregnancy. If this is not possible, however, reducing the daily number of cigarettes smoked can minimize the risks for both the mother and child. This is especially true for people in developing countries, where breastfeeding is essential for the child's overall nutritional status. d5b7a1cc25 Early lung cancer often has no symptoms and can only be detected by medical imaging. As the cancer progresses, most people experience nonspecific respiratory problems: coughing, shortness of breath, or chest pain. Other symptoms depend on the location and size of the tumor. Those suspected of having lung cancer typically undergo a series of imaging tests to determine the location and extent of any tumors. Definitive diagnosis of lung cancer requires a biopsy of the suspected tumor be examined by a pathologist under a microscope. In addition to recognizing cancerous cells, a pathologist can classify the tumor according to the type of cells it originates from. Around 15% of cases are small-cell lung cancer (SCLC), and the remaining... d5b7a1cc25

Tobacco smoking Tobacco was introduced to Eurasia in the 17th century by European colonists, where it followed common trade routes. The practice encountered criticism

from its first import into the Western world onward but embedded itself in certain strata of several societies before becoming widespread upon the introduction of automated cigarette-rolling apparatus. link between smoking and lung cancer in the late 1920s, leading to the first anti-smoking campaign in modern history, albeit one truncated by the collapse Tobacco smoking is the practice of burning tobacco and the absorption of the resulting smoke into one's body. The practice is believed to have begun as early as 5000–3000 BC in Mesoamerica and South America. The smoke may be inhaled, as is done with cigarettes, or released from the mouth, as is done with pipes and cigars d5b7a1cc25

Smoking ban health regulations, that prohibit tobacco smoking in certain spaces. The spaces most commonly affected by smoking bans are indoor workplaces and buildings Smoking bans, or smoke-free laws, are public policies, including criminal laws and occupational safety and health regulations, that prohibit tobacco smoking in certain spaces. The spaces most commonly affected by smoking bans are indoor workplaces and buildings open to the public such as restaurants, bars, office buildings, schools, retail stores, hospitals, libraries, transport facilities, and government buildings, in addition to public transport vehicles such as aircraft, buses, watercraft, and trains. However, laws may also prohibit smoking in outdoor areas such as parks, beaches, pedestrian plazas, college and hospital campuses, and within a certain distance from the entrance to a building, and in some cases, private vehicles and multi-unit residences d5b7a1cc25

Capnolagnia is not considered a disease but an unusual sexual practice, and many of the fetishists do not seek medical help unless this behavior strongly interferes with their daily lives. The majority of people simply learn to accept their fetish and manage to achieve gratification in an appropriate manner. d5b7a1cc25 Smoking is legally permitted, with certain conditions set from laws enacted separately in England, Wales, Scotland and Northern Ireland. It is illegal to smoke tobacco in enclosed public

places, such as restaurants, shops or pubs, under the Health Act 2006 for England and Wales, the Smoking (Northern Ireland) Order 2006 for Northern Ireland and the Smoking, Health and Social Care (Scotland) Act 2005 for Scotland. In England and Wales, it is also illegal to smoke in a car if one is transporting people under 18 or if a vehicle is being used for work purposes. Smoking is prevalent among a sizeable, but continuously reducing minority of the population. It has been argued that smoking puts considerable strain upon the National Health Service (NHS) due to the health problems which can be directly linked with smoking, though early deaths from smoking relieve the NHS from caring for long-term debilities. Successive UK Governments have endeavoured to reduce the... d5b7a1cc25 A 2003 study found that the fetish was not previously the subject of academic study but had been mentioned in "a few newspapers". d5b7a1cc25

Lung In mammals and most other tetrapods, two lungs are located near the backbone on either side of the heart. In mammals and most other tetrapods, two lungs are located The lungs are the primary organs of the respiratory system in many animals, including humans. Mammals, reptiles and birds use their musculoskeletal systems to support and foster breathing. Respiration is driven by different muscular systems in different species. The lungs are the primary organs of the respiratory system in many animals, including humans. Their function in the respiratory system is to extract oxygen from the atmosphere and transfer it into the bloodstream, and to release carbon dioxide from the bloodstream into the atmosphere, in a process of gas exchange. The lungs also provide airflow that makes vocalisation including speech possible. In early tetrapods, air was driven into the lungs by the pharyngeal muscles via buccal pumping, a mechanism still seen in amphibians. In humans, the primary muscle that drives breathing is the diaphragm d5b7a1cc25

The most common rationale cited for restrictions on smoking is the negative health effects associated with secondhand smoke (SHS), or the inhalation of tobacco smoke by persons

who are not smoking. These include diseases such as heart disease, cancer, and chronic obstructive pulmonary disease. The number of smoking bans around the world... d5b7a1cc25

Women and smoking A wide variety of diseases and medical phenomena affect the sexes differently, and the same holds true for the effects of tobacco. Since the proliferation of tobacco, many cultures have viewed smoking as a masculine vice, and as such the majority of research into the specific differences between men and women with regard to the effects of tobacco have only been studied in-depth in recent years. A wide variety of diseases and medical phenomena affect the sexes differently, and the same Tobacco smoking has serious negative effects on the body. Tobacco smoking has serious negative effects on the body d5b7a1cc25

A generational smoking ban is a ban on selling cigarettes to people born after a certain year. d5b7a1cc25

Smoking fetishism As a fetish, its mechanisms regard sexual arousal from the observation or imagination of a person smoking, sometimes including oneself. Smoking fetishism (also known as capnolagnia) is a sexual fetish based on the pulmonary consumption (smoking) of tobacco, most often via cigarettes, cigars Smoking fetishism (also known as capnolagnia) is a sexual fetish based on the pulmonary consumption (smoking) of tobacco, most often via cigarettes, cigars, cannabis and also pipes, vapes, and hookahs to some extent d5b7a1cc25

Lung cancer in Australia Lung cancer is the leading cause of cancer death in Australia and is responsible for one fifth of cancer diagnosis in the nation. implicated in lung cancer particularly as it is breathed in and deposited in the lungs This consequently damages the lining of the lungs and eventually Lung cancer in Australia has killed more than 9,000 people and there are estimated to be over 12,500 new cases as of 2018. There has been relative success in these campaigns, and in treatment, as survival rates have improved from 9. Attitudes towards habitual smoking in youth and young adult groups have also subsequently changed

in response to this. 2% to 17% as of 2014. However, there is a growing stigma surrounding people living with Lung Cancer, and a large portion of work conducted by the Lung Foundation Australia is directed towards supporting the health and welfare of those affected. It is differentiated into two different types: Non-small cell lung cancer and small cell-lung cancer. There are a range of diagnostic and treatment options available to treat both disease types. Smoking tobacco cigarettes is considered the leading risk factor of lung cancer in Australia, and Government-led public health schemes have aimed to reduce smoking and minimise its lung cancer risk d5b7a1cc25

Women who are pregnant or planning to become pregnant are advised to stop smoking. It is important to examine these effects because smoking before, during and after pregnancy is not an unusual behavior among the general population and can have detrimental health impacts, especially among both mother and child, as a result. d5b7a1cc25 In addition to being smoked and vaporized, cannabis and its active cannabinoids may be ingested, placed under the tongue, or applied to the skin. The bioavailability characteristics and effects of smoking and vaporizing cannabis differ from other cannabis consumption methods in having a more rapid and predictable onset of effect. d5b7a1cc25 Smoking is the most common method of consuming tobacco, and tobacco is the most common substance smoked. The agricultural product is often mixed with additives and then combusted. The resulting smoke, which contains various active substances, the most significant of which is the addictive psychostimulant drug nicotine (a compound naturally found in tobacco), is absorbed through the alveoli in the lungs or the oral mucosa. Many substances in cigarette smoke, chiefly nicotine, trigger chemical reactions in nerve endings... d5b7a1cc25 According to a 1999 meta-analysis published in the American Journal of Preventive Medicine, smoking prior to pregnancy... d5b7a1cc25 As of 2018, lung cancer remains the leading cause of cancer death... d5b7a1cc25 == Background == d5b7a1cc25 == Prevalence == d5b7a1cc25

Cannabis smoking Smoking cannabis has been shown to be harmful to the health of the smoker, and may also be harmful to others through passive smoking. Cannabis smoking (known colloquially as smoking weed or smoking pot) is the inhalation of smoke or vapor released by heating the flowers, leaves, or extracts Cannabis smoking (known colloquially as smoking weed or smoking pot) is the inhalation of smoke or vapor released by heating the flowers, leaves, or extracts of cannabis and releasing the main psychoactive chemical, Δ^9 -tetrahydrocannabinol (THC), which is absorbed into the bloodstream via the lungs. Archaeological evidence indicates cannabis with high levels of THC was smoked at least 2,500 years ago. 4 million people (aged 10 years or older) consuming it on a monthly basis. As of 2021, cannabis is the most commonly consumed federally illegal drug in the United States, with 36

Lung cancer Lung cancer is a malignant tumor that originates in the tissues of the lungs. Lung cancer is caused by genetic damage to the DNA of cells in the airways, often caused by cigarette smoking or inhaling damaging chemicals. Lung cancer is caused by genetic damage to the DNA of cells in the airways Lung cancer is a malignant tumor that originates in the tissues of the lungs. Eventually lung tumors metastasize, spreading to other parts of the body. Without treatment, tumors spread throughout the lung, damaging lung function. Damaged airway cells gain the ability to multiply unchecked, causing the growth of a tumor
