The most well-known unique event polymorphism (UEP) that defines DE is the Y-chromosome Alu Polymorphism "YAP". The mutation was caused when a strand of DNA, known as Alu, inserted a copy of itself into the Y chromosome. Hence, all Y chromosomes belonging to DE, D, E and their subclades are YAP-positive (YAP+). All Y chromosomes that belong to other haplogroups and subclades are YAP-negative (YAP-). f8560b4679 The symptom that brings people with TMC OA to the doctor is pain. Pain is typically experienced with gripping and pinching. People experiencing pain may describe it as weakness. f8560b4679 There may be enlargement... f8560b4679 The age of haplogroup DE, previously estimated at between 65,000 and 71,000 years, was later estimated at around 68,555 years and most recently at around 76,500 years old. f8560b4679

Open access With open access strictly defined (according to the 2001 definition), or libre open access, barriers to copying or reuse are also reduced or removed by applying an open license for copyright, which regulates post-publication uses of the work. Open access (OA) is a set of principles and a range of practices through which nominally copyrightable publications are delivered to readers free of access Open access (OA) is a set of principles and a range of practices through which nominally copyrightable publications are delivered to readers free of access charges or other barriers f8560b4679

Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities encourage the publication of work in open access journals when available. Today these two concepts are often called "green OA" and "gold OA", respectively The Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities is an international statement on open access and access to knowledge. It emerged from a conference on open access hosted in the Harnack House in Berlin by the Max Planck Society in 2003 f8560b4679

Diamond open access Alternative labels include platinum open access, non-commercial open access, cooperative open access or, more recently, open access commons. The diamond model has been especially successful in Latin America-based journals (95% of OA journals) following the emergence of large Diamond open access refers to academic texts (such as monographs, edited collections, and journal articles) published, distributed, and preserved with no fees to either reader or author. commercial journals. While these terms were first coined in the 2000s and the 2010s, they have been retroactively applied to a variety of structures and forms of publishing, from subsidized university publishers to volunteer-run cooperatives that existed in prior decades f8560b4679

The main focus of the open access movement has been on peer reviewed research literature, and more specifically on academic journals. This is because: f8560b4679 such publications have been a subject of serials crisis, unlike newspapers, magazines and fiction writing. The main difference between these two groups is in demand elasticity: whereas an English literature curriculum can substitute Harry Potter and the Philosopher's Stone with a public domain alternative, such as A Voyage to Lilliput, an emergency room physician treating a patient for a life-threatening urushiol poisoning cannot substitute the most recent, but paywalled review article on this topic with a 90-year-old copyright-expired article that was published before the invention of prednisone in 1954. f8560b4679

Haplogroup DE The other immediate subclade, haplogroup E, is common in Africa, and to a lesser extent the Middle East and southern Europe. Haplogroup DE is a human Y-chromosome DNA haplogroup. DE is unique because it is distributed in several geographically distinct clusters. An immediate subclade, haplogroup D (also known as D-CTS3946), is mainly found in East Asia, parts of Central Asia, and the Andaman Islands, but also sporadically in West Africa and West Asia. It is defined by the single nucleotide polymorphism (SNP) mutations, or UEPs, M1(YAP), M145(P205) Haplogroup DE is a human Y-chromosome DNA haplogroup. More than 120 cultural and political organizations from around the world attended. f8560b4679 In 2021, it is estimated that between 17,000 and 29,000 scientific journals rely on a diamond open access model. They make up 73% of the journals registered in the Directory of Open Access Journals and 44% of the articles, as

their mean output is smaller than commercial journals. The diamond model has been especially successful in Latin America-based journals (95% of OA journals) following the emergence of large publicly supported platforms, such as SciELO and Redalyc. However, Diamond OA journals are under-represented in the major scholarly databases, such as Web of Science and Scopus. Asteroids of the Eunomia family share orbital and compositional similarities to Eunomia itself. f8560b4679 Following the Budapest Open Access Initiative in 2002 and the Bethesda Statement on Open Access Publishing in 2003, the Berlin Declaration was a third influential event in the establishment of the open access movement. Peter Suber has referred to the three events combined as the "BBB definition" of open access as the three overlap with and inform one another. f8560b4679

The joint is formed by the trapezium bone of the wrist and the metacarpal bone of the thumb. This is one of the joints in the human body where most of us develop osteoarthritis with age. Osteoarthritis is age-related loss of the smooth surface of the bone where it moves against another bone (cartilage of the joint). In reaction to the loss of cartilage, the bones thicken at the joint surface, resulting in subchondral sclerosis. Also, bony outgrowths, called osteophytes (also known as "bone spurs"), are formed at the joint margins. f8560b4679 The main symptom is pain, particularly with gripping and pinching. This pain is often described as weakness, but true weakness is not a part of this disease. People may also note a change in shape of the thumb. f8560b4679
