Rhinoplasty There are two types of plastic surgery used - reconstructive surgery that restores the form and functions of the nose and cosmetic surgery that changes the appearance of the nose. Surgery only on the septum is called a septoplasty. Reconstructive surgery seeks to resolve nasal injuries caused by various traumas including blunt, and penetrating trauma and trauma caused by blast injury. Rhinoplasty may remove a dorsal hump, narrow the nostril width, alter the nasolabial angle, or address injuries, birth defects, or other functional issues that affect breathing, such as a deviated nasal septum, internal nasal valve collapse, or external nasal valve collapse. Rhinoplasty, sometimes referred to as a "nose job," is a plastic surgery procedure performed to change the shape, size, or proportions of the nose or Rhinoplasty, sometimes referred to as a "nose job," is a plastic surgery procedure performed to change the shape, size, or proportions of the nose or to improve nasal function and breathing. Reconstructive surgery can also treat birth defects, breathing problems, and failed primary rhinoplasties

Salzhauer went to a public high school, where he was teased over the shape of his nose, and he left and went to the Frisch School, a Jewish high school. He then attended Rockland Community College from 1989 to 1990 before transferring to Brooklyn College. After two years he transferred to Washington University School of Medicine in St. Louis, Missouri. The modern Korean interest in physical appearance dates back to the 7th century, finding its roots in physiognomy (gwansang), the belief that one's facial features reveal their personality and destiny. The concept of connecting identity and appearance became stronger during the Japanese colonial period in Korea, as Japanese rulers promoted the idea that certain facial features displayed greater intelligence and nobility. Subsequently, plastic surgery techniques were introduced by American doctors during the Korean War, which

contributed to the acceptance of the Western notion that changing one's face could change one's destiny.

Cosmetic surgery in Australia At the end of the fifteenth Cosmetic surgery, also referred to as aesthetic surgery, is a surgical procedure which endeavours to improve the physical aspects of one's appearance to become more aesthetically pleasing. The continuously growing field of cosmetic surgery is closely linked with plastic surgery, the difference being, cosmetic surgery is an elective surgery with the sole purpose to enhance the physical features of one's appearance. Although the implementation of cosmetic surgery within Australian society is growing, the trade has struggled to find its place within the Australian culture. The inevitable aim of cosmetic surgery is to enhance one's image, encompassing reducing the signs of aging and/or correction of a believed deviation on one's body in turn it is surrounded by controversy. Cosmetic surgical procedures are generally performed on healthy functioning body parts, with the procedure being optional not medically necessary. Plastic surgery is performed in order to rectify defects to reinstate normality to function and appearance. Plastic surgery originated in 600 BC when Hindu surgeons performed rhinoplasty with the use of segments of cheek tissue 2348daf4e8
