It is not known how long the spot will last, or whether the change is a result of periodic fluctuations. A similar spot was observed from 1665 to 1713; if this is the same storm, it has existed for at least 361 years, but a study from 2024 suggests this is not the case. It was first observed in September 1831, with 60 recorded observations between then and 1878, when continuous observations began. Located 22 degrees south of Jupiter's equator, it produces wind speeds up to 496 km/h (308 mph). It is the most recognizable feature on Jupiter, owing to its red-orange color, whose origin is still unknown 3ccd9ed732

After discovering and surfing all the coral reef surf breaks of Bali, Barry started his search on the southeast coast of Java during mid-1971. Before that, whilst surfing in Western Australia, he had witnessed the huge rolling swells traveling north through the Indian Ocean. He had a theory there was great surfing potential in Indonesia. 3ccd9ed732

The practice has a particular value in helping authenticate objects. Comparative techniques, expert opinions and the results of scientific tests may also be used to these ends, but establishing provenance is essentially a matter of documentation. The term dates to the 1780s in English. Provenance is conceptually comparable to the legal term chain of custody. 3ccd9ed732 The spot-bellied bobwhite is found in El Salvador, Guatemala, Honduras, Nicaragua and Costa Rica in open savanna with bushes and trees and other open woodland. 3ccd9ed732
