Yaqui language (SUBJ) 'á'a Him Yoém-ia-k Child-NZ-POS (OBJ) 'áapo 'á'a Yoém-ia-k {He (SUBJ)} Him {Child-NZ-POS (OBJ)} He is his child. It is partially intelligible with the Mayo language, also spoken in Sonora, and together they are called Cahitan languages. It is spoken by about 20,000 Yaqui people in the Mexican state of Sonora and across the border in Arizona in the United States. In the following example, we can see Yaqui (or Hiaki), locally known as Yoeme or Yoem Noki, is a Native American language of the Uto-Aztecan family 451200dccc

Icon (programming language) Because the logic for basic control structures is often implicit in Icon, common tasks can be completed with less explicit code. line of text or &fail. &fail is not simply an analog of EOF, as it is explicitly understood by the language to mean "stop processing" or "do the fail Icon is a very high-level programming language based on the concept of "goal-directed execution" in which an expression in code returns "success" along with a result, or a "failure", indicating that there is no valid result. The success and failure of a given expression is used to direct further processing, whereas conventional languages would typically use Boolean logic written by the programmer to achieve the same ends 451200dccc

Datar-Mathews method for real option valuation The method can be understood as an extension of the net present value (NPV) multi-scenario Monte Carlo model with an adjustment for risk aversion and economic decision-making. Mathews, Technical Fellow at The Boeing Company. The method uses information that arises naturally in a standard discounted cash flow (DCF), or NPV, project financial valuation. The method provides an easy way to determine the real option value of a project simply by using the average of positive outcomes for the project. pay-off is

To calculate the amount owed by a customer, the merchant may use various devices such as weighing scales, barcode scanners, and cash registers (or the more advanced "POS cash registers", which are sometimes also called "POS systems"). To make a payment, payment terminals, touch screens, and other hardware and software options are available. 451200dccc

Brazilian Navy Programa de Pós-Graduação em Psicologia Social da Universidade do Estado do Rio de Janeiro. It has defense, management and constabulary roles in Brazilian jurisdictional waters and broader missions in the South Atlantic. Its naval, aviation and marine assets are spread between a combat Fleet (the Esquadra) based at Rio de Janeiro state and auxiliary and patrol assets along the coast and the Amazon and Platine basins. Moraes The Brazilian Navy (Portuguese: Marinha do Brasil, IPA: [ma'ɾĩje du bra'ziw], MB) is the naval and coast guard service branch of Brazil's Armed Forces as well as its maritime authority.

Beyond conveying "I still want to talk", fillers can also convey more: whether the speaker is just trying to find the right word or is struggling to formulate his/her thought at a deeper level. "Uh" is more common in the former, and "um" in the latter. However fillers are often more complex, conveying many nuances of meaning and doing so through subtle variation, both prosodic and phonetic, such that many fillers are... 451200dccc == Usage == 451200dccc == Method == 451200dccc Like the languages that inspired it, the primary area of use of Icon... 451200dccc

Parsing expression grammar 4: First branch In computer science, a parsing expression grammar (PEG) is a type of analytic formal grammar, i. e. it describes a formal language in terms of a set of rules for recognizing strings in the language. The formalism was introduced by Bryan Ford in 2004 and is closely related to the family of top-down parsing languages introduced in the early 1970s. 6: Neither branch of S matches ↑ Pos. Results: ↑ Pos. ↑ Pos. 5: First branch of S fails, second branch succeeds, yielding match of length 1 451200dccc

Evaluation for an information retrieval system should also include a validation of the measures used, i.e. an assessment of how well they measure what they are intended to measure and how well the system fits its intended use case. Measures are generally used in two settings: online experimentation, which assesses users' interactions with the search system, and offline... 451200dccc Brazilian Portuguese differs from varieties spoken in Portugal and Portuguese-speaking African countries, particularly in phonology and prosody. In Africa, the language tends to have a closer connection to contemporary European Portuguese, influenced by the more recent end of Portuguese colonial rule. This has contributed to a notable difference in the relationship between written, formal language and spoken forms in Brazilian Portuguese. The differences between formal written Portuguese and informal spoken varieties in Brazilian Portuguese have been documented in sociolinguistic studies. Some scholars, including Mario A. Perini, have suggested that these differences might exhibit characteristics of diglossia, though this interpretation remains a subject of debate among linguists. Other researchers argue that such variation aligns with patterns... 451200dccc

Filler (linguistics) Fillers fall into the category of formulaic language, and different languages have different characteristic filler sounds. Additional filler words In linguistics, a filler, filled pause, hesitation marker or planner is a sound or word that participants in a conversation use to signal that they are pausing to think but are not finished speaking. These are not to be confused with placeholder names, such as thingamajig. are t'sais veux dire. ("y'know what I mean. "; Québec), or allez une fois ("go one time"; especially in Brussels, not in Wallonia). The term filler also has a separate use in the syntactic description of wh-movement constructions (see below) 451200dccc

The point of sale is often referred to as the point of service because it is not just a point of sale but also a point of return or customer order. The success of an IR system may be judged by a range of criteria including relevance, speed, user satisfaction, usability, efficiency and reliability. Evaluation measures may be categorised in various ways including offline or online, user-based or system-based and include methods such as observed user behaviour, test collections, precision and recall, and scores from prepared benchmark test sets. 451200dccc Syntactically, PEGs also look similar to context-free grammars (CFGs), but they have a different interpretation: the choice operator selects the first match in PEG, while it is ambiguous in CFG. This is closer to how string recognition tends to be

done in practice, e.g. by a recursive descent parser. 451200dccc == Mythology == 451200dccc

Brazilian Portuguese It is spoken by nearly all of the 203 million inhabitants of Brazil, and widely across the Brazilian diaspora, consisting of approximately two million Brazilians who have emigrated to other countries. Every conversation involves turn-taking, and speakers need to signal whether they are yielding the turn or want to keep going. Pauses are common in both cases, but to avoid confusion, speakers wanting to continue commonly use fillers, such as um, er, or uh. 451200dccc == Phonology == 451200dccc

The point of sale (POS), or point of purchase (POP), is the time and place at which a retail transaction is completed. At the point of sale, the merchant calculates the amount owed by the customer, indicates that amount, may prepare an invoice for the customer (which may be a cash register printout), and indicates the options for the customer to make payment. After receiving payment, the merchant may issue a receipt, as proof of transaction, which is usually printed but can also be dispensed with or sent electronically 451200dccc

Icon was designed by Ralph Griswold after leaving Bell Labs where he was a major contributor to the SNOBOL language. SNOBOL was a string-processing language with what would be considered dated syntax by the standards of the early 1970s. After moving to the University of Arizona, he further developed the underlying SNOBOL concepts in SL5, but considered the result to be a failure. This led to the significantly updated Icon, which blends the short but conceptually dense code of SNOBOL-like languages with the more familiar syntax of ALGOL-inspired languages like C or Pascal. 451200dccc

Evaluation measures (information retrieval) They are therefore fundamental to the success of information systems and digital platforms.
$$s \sum_{k=1}^n p_{osk} k + n n e g \{\frac{1}{n_{pos}}\} \sum_{k=1}^n \{\frac{k}{k+n_{neg}}\}$$
 For modern (web-scale) information retrieval Evaluation measures for an information retrieval (IR) system assess how well an index, search engine, or database returns results from a collection of resources that satisfy a user's query 451200dccc

Unlike CFGs, PEGs cannot be ambiguous; a string has exactly one valid parse tree or none. It is conjectured that there exist context-free languages that cannot be recognized by a PEG, but this is not yet proven. PEGs are well suited to parsing computer languages (and artificial human languages such as Lojban) where multiple interpretation alternatives can be disambiguated locally, but are less likely to be useful for parsing natural languages where disambiguation may have to be global. 451200dccc The 19th century Imperial navy, organized from a section of the Portuguese Navy and influenced by the Royal Navy, was key to the Brazilian state's consolidation and foreign policy in the Platine region. By 1870, it was the world's fifth largest navy. However, the late century Republican coup and naval revolts downgraded its position relative to the Army. Its main rival was still the Argentine Navy, but German submarines were the enemy in both world wars. The Cold War fleet was an anti-submarine force under strong influence from the

United States Navy until it sought greater independence and diversified capabilities. Over its history, its largest ships were the Minas Gerais-class...
