

Pregnancy And Lower Abdominal Pain

Complications of pregnancy This syndrome results from a growing uterus during pregnancy that causes Complications of pregnancy are health problems that are related to or arise during pregnancy. of back and pelvic trauma, and previous history of pelvic and lower back pain. While some complications improve or are fully resolved after pregnancy, some may lead to lasting effects, morbidity, or in the most severe cases, maternal or fetal mortality. Complications that occur primarily during childbirth are termed obstetric labor complications, and problems that occur primarily after childbirth are termed puerperal disorders 27afe939bb

Round ligament pain It usually resolves completely after delivery although cases of postpartum RLP (that is, RLP that persisted for a few days after delivery) have been reported. RLP is one of the most common discomforts of pregnancy and usually starts at the second trimester of gestation and continues until delivery. RLP is one of the most common discomforts of pregnancy Round ligament pain (RLP) is pain associated with the round ligament of the uterus, usually during pregnancy. pain (RLP) is pain associated with the round ligament of the uterus, usually during pregnancy. RLP also occurs in nonpregnant women 27afe939bb

Abdominal ultrasound examinations are performed by gastroenterologists or other specialists in internal medicine, radiologists, or sonographers trained for this procedure. 27afe939bb

Abdominal pregnancy abdominal pregnancy is a rare type of ectopic pregnancy where the embryo or fetus is growing and developing outside the uterus, in the abdomen, and not An abdominal pregnancy is a rare type of ectopic pregnancy where the embryo or fetus is growing and developing outside the

uterus, in the abdomen, and not in a fallopian tube (usual location), an ovary, or the broad ligament 27afe939bb

Common causes of pain in the abdomen include gastroenteritis and irritable bowel syndrome. About 15% of people have a more serious underlying condition such as appendicitis, leaking or ruptured abdominal aortic aneurysm, diverticulitis, or ectopic pregnancy. In a third of cases, the exact cause is unclear.

27afe939bb The round ligament of the uterus goes from the pelvis, passes through the internal abdominal ring, and runs along the inguinal canal to the labia majora. It is the structure that holds the uterus suspended inside the abdominal cavity. There are at least 2 other round ligaments in the human body, the round ligament of the liver (ligamentum teres hepatis) and the round ligament of the head of the femur (ligamentum teres femoris). 27afe939bb It is a dangerous condition as there can be bleeding into the abdomen that results in low blood pressure and can be fatal. Other causes of death in women with an abdominal pregnancy include anemia, pulmonary... 27afe939bb == Medical uses == 27afe939bb

Abdominal examination Finally, percussion (tapping) of the patient's abdomen and abdominal organs. Depending on the need to test for specific diseases such as ascites, special tests may be performed as a part of the physical examination. Auscultation (listening) of the abdomen with a stethoscope. medications during acute abdominal pain may hinder diagnosis and treatment, separate systematic reviews by the Cochrane Collaboration and the Rational Clinical An abdominal examination is a portion of the physical examination which a physician or nurse uses to clinically observe the abdomen of a patient for signs of disease. An abdominal examination may be performed because the physician suspects a disease of the organs inside the abdominal cavity (including the liver, spleen, large or small intestines), or simply as a part of a complete physical examination for other conditions. Palpation of the patient's abdomen. The abdominal examination is conventionally split into four different stages: first, inspection of the patient and the visible characteristics of their abdomen. In a complete physical examination, the abdominal exam classically follows the respiratory examination and

cardiovascular examination 27afe939bb

Symptoms may include abdominal pain or vaginal bleeding during pregnancy. As this is nonspecific in areas where ultrasound is not available the diagnosis was often only discovered during surgery to investigate the abnormal symptoms. They are typically diagnosed later in the developing world than the developed. In about half of cases from a center in the developing world the diagnosis was initially missed. 27afe939bb

False pregnancy The mistaken impression that one is pregnant includes signs and symptoms such as tender breasts with secretions, abdominal growth, delayed menstrual periods, and subjective feelings of a moving fetus. Examination, ultrasound, and pregnancy tests can be False pregnancy (or pseudocyesis, from Ancient Greek *pseudes* 'false' and *kyesis* 'pregnancy') is the appearance of clinical or subclinical signs and symptoms associated with pregnancy although the individual is not physically carrying a fetus. secretions, abdominal growth, delayed menstrual periods, and subjective feelings of a moving fetus. Examination, ultrasound, and pregnancy tests can be used to rule out false pregnancy 27afe939bb

Because tubal, ovarian and broad ligament pregnancies are as difficult to diagnose and treat as abdominal pregnancies, their exclusion from the most common definition of abdominal pregnancy has been debated. 27afe939bb Severe complications of pregnancy, childbirth, and the puerperium are present in 1.6% of mothers in the US, and in 1.5% of mothers in Canada. In the immediate postpartum period (puerperium), 87% to 94% of women report at least one health problem. Long-term health problems (persisting after six months postpartum) are reported by 31% of women. 27afe939bb

Abdominal ultrasonography For this reason, the procedure is also called a transabdominal ultrasound, in contrast to endoscopic ultrasound, the latter combining ultrasound with endoscopy through visualize internal structures from within hollow organs. Abdominal ultrasound is commonly used in the setting of abdominal pain or an Abdominal ultrasonography (also called abdominal ultrasound imaging or abdominal

sonography) is a form of medical ultrasonography (medical application of ultrasound technology) to visualise abdominal anatomical structures. It uses transmission and reflection of ultrasound waves to visualise internal organs through the abdominal wall (with the help of gel, which helps transmission of the sound waves). uterus and fetus during pregnancy; this is called obstetric ultrasonography 27afe939bb

False pregnancy has a prominent psychiatric component as well as physical manifestations of pregnancy. It can be caused by trauma (either physical or mental), a chemical imbalance of hormones, and some medical conditions. Contributing psychological factors include a strong desire for pregnancy or misinterpretation of objective bodily sensations. Although rare, men can experience false pregnancy symptoms, called Couvade syndrome or "sympathetic pregnancy", which can occur when their partner is pregnant and dealing with pregnancy symptoms. Psychotherapy, pharmacotherapy with antidepressants or antipsychotics, hormonal therapy, and uterine curettage are sometimes... 27afe939bb Options for

medical imaging in pregnancy include the following:
27afe939bb Abdominal ultrasound can be used to diagnose abnormalities in various internal organs, such as the kidneys, liver, gallbladder, pancreas, spleen and abdominal aorta. If Doppler ultrasonography is added, the blood flow inside blood vessels can be evaluated as well (for example, to look for renal artery stenosis). It is commonly used to examine the uterus and fetus during pregnancy... 27afe939bb In 2016, complications of pregnancy, childbirth, and the puerperium resulted in 230,600 deaths globally, down from 377,000 deaths in 1990. The most... 27afe939bb == Options == 27afe939bb == Signs and symptoms == 27afe939bb

Ectopic pregnancy EUP). k. Severe bleeding may result in a fast heart rate, fainting, or shock. k. With very rare exceptions, the fetus is unable to survive. EUP). a. The pain may be described as sharp, dull, or crampy. This complication has also been referred to as an extrauterine pregnancy (a. a. Signs and symptoms classically include abdominal pain and vaginal bleeding, but fewer than 50 percent of affected women have both of these symptoms. Signs and symptoms classically

include abdominal pain and vaginal bleeding, but fewer than 50
Ectopic pregnancy is a complication of pregnancy in which the embryo attaches outside the uterus. Pain may also spread to the shoulder if bleeding into the abdomen has occurred. been referred to as an extrauterine pregnancy (a 27afe939bb

Signs and symptoms of pregnancy If a person is concerned about their symptoms they should be encouraged to speak with an appropriate healthcare professional. Hemorrhoids can cause bleeding, pain, and itching. Each pregnancy can be quite different and many people do not experience the same or all of the symptoms. Signs and symptoms of pregnancy typically change as pregnancy progresses, although several symptoms may be present throughout. are common in pregnancy as a result of constipation and increased intra-abdominal pressure. Pregnancy symptoms may be categorized based on trimester as well as region of the body affected. Treatment Signs and symptoms of pregnancy are common, benign conditions that result from the changes to the body that occur during pregnancy. Depending on severity, common symptoms in pregnancy can develop into complications 27afe939bb

== Symptoms == 27afe939bb Common complications of pregnancy include anemia, gestational diabetes, infections, gestational hypertension, and pre-eclampsia. Presence of these types of complications can have implications on monitoring lab work, imaging, and medical management during pregnancy. 27afe939bb == Positioning and environment == 27afe939bb Many of the early signs of pregnancy will be similar to symptoms that come right before a period, and it can be hard to tell the difference. 27afe939bb

Medical imaging in pregnancy women with acute abdominal pain and/or pelvic pain, or in suspected neurological disorders, placental diseases, tumors, infections, and/or cardiovascular Medical imaging in pregnancy may be indicated because of pregnancy complications, intercurrent diseases or routine prenatal care 27afe939bb

Overall, ectopic pregnancies annually affect less than 2% of

pregnancies worldwide. Risk factors for ectopic pregnancy include pelvic inflammatory disease, often due to chlamydia infection; tobacco smoking; endometriosis; prior tubal surgery; a history of infertility; and the use of assisted reproductive technology. Those who have previously had an ectopic pregnancy are at much higher risk of having another one. Most ectopic pregnancies (90%) occur in the fallopian tube, which are known as tubal pregnancies, but implantation can also occur on the cervix, ovaries, caesarean scar, or within the abdomen... 27afe939bb Others—in the minority—are of the view that abdominal pregnancy should be defined by a placenta implanted into the peritoneum. 27afe939bb The most common symptoms of RLP are: 27afe939bb

Abdominal pain The onset of abdominal pain can Abdominal pain, also known as a stomach ache, is a symptom associated with both non-serious and serious medical issues. Since the abdomen contains most of the body's vital organs, it can be an indicator of a wide variety of diseases. In a third of cases, the exact cause is unclear. ruptured abdominal aortic aneurysm, diverticulitis, or ectopic pregnancy. Given that, approaching the examination of a person and planning of a differential diagnosis is extremely important 27afe939bb
