Olympics and Paralympics. The International Olympic Committee (IOC) does not officially recognize a ranking of participating countries at the Olympic Games. Nevertheless, the IOC does publish medal tallies for information purposes, showing the total number of Olympic medals earned by athletes representing each country's respective National Olympic Committee. The convention used by the IOC is to sort by the number of gold medals the athletes from a country have earned. In the event of a tie in the number of gold medals, the number of silver medals is taken into consideration, and then the number of bronze medals. If two countries have an equal number of gold, silver, and bronze medals, they are ordered in the table

alphabetically by their IOC country code.

The results are attributed to the IOC country code as currently displayed by the IOC database. Usually, a single code corresponds to a single National Olympic Committee (NOC). When different codes are displayed for different years, medal counts are combined in the case of a simple change of IOC code (such as from HOL to NED for the Netherlands) or simple change of country name (such as from Ceylon to Sri Lanka). As the medals are attributed to each NOC, not all totals include medals won by athletes from that country for another NOC, such as before independence of that country.
