Ear The inner ear sits in the bony labyrinth, and contains structures which are key to several senses: the semicircular canals, which enable balance and eye tracking when moving; the utricle and saccule, which enable balance when stationary; and the cochlea, which enables hearing. The middle ear includes the tympanic cavity and the three ossicles. The ear canal is cleaned via earwax, which naturally migrates to the auricle. In humans, the ear is described as having three parts: the outer ear, the middle ear and the inner ear. The ossicles In vertebrates, an ear is the organ that enables hearing and (in mammals) body balance using the vestibular system. The outer ear consists of the auricle, the visible outer part, and the ear canal. tympanic membrane, fluid in the inner ear moves and pushes the membrane of the round window out by a corresponding amount into the middle ear b4751fd803
