Comparisons of national wealth are also frequently made on the basis of purchasing power parity (PPP), to adjust for differences in the cost of living in different countries. PPP largely removes the exchange rate problem, but has its own drawbacks; it does not reflect the value of economic output in international trade, and it also requires more estimation than nominal GDP. For example, while the nominal GDP ranks of Germany and India are third and fourth respectively, when adjusted for PPP Germany's GDP drops to sixth and India rises to third because the local cost of goods in India is lower, and thus the same nominal amount of... f1381c0fe6 The 2026 estimates are as follows: f1381c0fe6
