COVID-19 pandemic in India Multiple studies, using several different sources of data and methods, have found similarly large estimates of excess deaths in India. In October 2021, the World Health Organization estimated 4. 849 deaths. These deaths were distributed unequally - marginalized social groups and women were more likely to have been impacted compared to privileged social groups and men. In October 2021, the World Health Organization estimated 4. 7 million excess deaths, both directly and indirectly related to COVID-19 to have taken place in India. As of 30 August 2026, according to Indian government figures, India has the second-highest number of confirmed cases in the world (after the United States) with 45,056,221 reported cases of COVID-19 infection and the third-highest number of COVID-19 deaths (after the United States and Brazil) at 533,849 deaths. COVID-19 is caused by SARS-CoV-2. 7 million excess deaths, both directly and indirectly related to COVID-19 to have The COVID-19 pandemic in India is a part of the COVID-19 pandemic a4965f313c

CoronaVac effective against deaths. In January 2024, Sinovac confirmed that production of CoronaVac had been discontinued. Its use was highest in low- and middle-income countries. In Brazil, after 75% of the population in Serrana, São Paulo, received CoronaVac, preliminary results show deaths fell by 95%, hospitalizations CoronaVac, also known as the Sinovac COVID-19 vaccine, was a whole inactivated virus SARS-CoV-2 vaccine developed by Sinovac and extensively deployed globally to control the COVID-19 pandemic a4965f313c

Clinical trials have demonstrated that a standard two-dose regimen provides moderate efficacy against symptomatic COVID-19, ranging from about 50% to 83% depending on population and circulating viral variants, with more robust protection observed against severe disease, hospitalization, and death. Although most adverse reactions are mild and serious vaccine-related events are rare, the vaccine’s immune protection against symptomatic infection wanes over time, especially in the context of emerging variants such as Omicron, leading to recommendations for booster doses to sustain immunity and reduce severe outcomes. Overall, CoronaVac’s safety and efficacy profile in preventing severe COVID-19 have contributed to its use in vaccination programs, particularly in regions with limited access to mRNA vaccines. a4965f313c
