Banker's acceptance After acceptance, the request becomes an unconditional liability of the bank. Banker's acceptances are distinguished from ordinary time drafts in that ownership is transferable before maturity, allowing them to be traded in the secondary market. A banker's acceptance starts with a deposit in the amount of the A banker's acceptance is a document issued by a bank institution that represents a bank's commitment to make a requested future payment. ownership is transferable before maturity, allowing them to be traded in the secondary market. The request will typically specify the payee, the amount, and the date on which it is eligible for payment

This change in reaction rate is a quantum effect that occurs mainly because heavier isotopologues have lower vibrational frequencies and, therefore, lower ground-state vibrational energies, than their lighter counterparts. In most cases, this implies a greater energy input needed for heavier isotopologues to reach the transition state (or, in rare cases, dissociation limit), and therefore, a slower reaction rate. The study of KIEs can help elucidate reaction mechanisms, and is occasionally exploited in drug development to improve unfavorable pharmacokinetics by targeted replacement of metabolically vulnerable C-H bonds with "stronger" C-D bonds (e.g., deutetrabenazine).

Flight feather The distance that a bird's longest primaries extend beyond its longest secondaries (or tertials) when its wings Flight feathers (Pennae volatus) are the long, stiff, asymmetrically shaped, but symmetrically paired pennaceous feathers on the wings or tail of a bird; those on the wings are called remiges (), singular remex (), while those on the tail are called rectrices (or), singular rectrix (). Even flightless birds still retain flight feathers, though sometimes in radically modified forms. In some species, these feathers have developed into long showy plumes used in visual courtship displays, while in others they create a sound during display flights. The flight feathers of some birds perform additional functions, generally associated with territorial displays, courtship rituals or feeding methods. The primary function of the flight feathers is to aid in the generation of both thrust and lift, thereby enabling flight. clear differences in their wing formulas. Tiny serrations on the leading edge of their remiges help owls to fly silently (and therefore hunt more successfully), while the extra-stiff rectrices of woodpeckers help them to brace against tree trunks as they hammer on them

A banker's acceptance starts with a deposit in the amount of the future payment plus fees. A time draft to be drawn on the deposit is issued for the payment at a future date, analogous to a post-dated check. The bank accepts (guarantees) the obligation to pay the holder of the draft, analogous to a cashier's check. The draft holder may

hold the acceptance until maturity and receive the face value payment from the bank, or it may sell (exchange) the acceptance at a discount to another party willing to wait until maturity to receive the bank's promised payment.

Secondary attack rate e. the case which introduced the pathogenic organism into the population) or the same infectious source. Secondary Attack Rate (SAR) is expressed by the following formula:
$$SAR = \frac{I_n}{M} \times 100$$
 In epidemiology, the secondary attack rate (SAR) is the proportion or probability of susceptible contacts who develop infection within a reasonable incubation period after known exposure to a primary (index) case (or patient zero, i. It is typically calculated in households, families, dormitories, barracks, or other closed groups (such as attending medical staff), where close contact facilitates person-to-person transmission.

Red Bull Racing and their driver Sebastian Vettel were the defending Constructors' and Drivers' Champions respectively, Vettel being one of five World Champions appearing on the grid. Vettel defended his World Championship at the 2011 Japanese Grand Prix, becoming the youngest driver, at 24 years and 98 days, to do so while helping Red Bull Racing defend their Constructors' Championship. It would also be the last season for veteran race winner Rubens Barrichello and the first season in which the Drag Reduction System (DRS) overtaking aid was used. KIE is considered one of the most essential and sensitive tools for studying reaction mechanisms, the knowledge of which allows improvement...

Kinetic isotope effect However, this formula is "semi-classical" in that it neglects the contribution In physical organic chemistry, a kinetic isotope effect (KIE) is the change in the reaction rate of a chemical reaction when one of the atoms in the reactants is replaced by one of its isotopes. rotational, and vibrational levels for the calculation of rate constants k_H and k_D . Formally, it is the ratio of rate constants for the reactions involving the light (k_L) and the heavy (k_H) isotopically substituted reactants (isotopologues): $KIE = k_L/k_H$

Prevalence It is derived by comparing the number of people found to have the condition with the total number of people studied and is usually expressed as a fraction, a percentage, or the number of cases per 10,000 or 100,000 people. Prevalence is most often used in questionnaire studies. as a percentage of the population and can be described by the following formula: Period prevalence (proportion)

1994 was one of the most tragic and controversial seasons in the sport's history. The San Marino Grand Prix saw the deaths of Austrian rookie Roland Ratzenberger and Brazilian three-time World Champion Ayrton Senna, while a number of other incidents throughout the season resulted in injuries to drivers, mechanics, spectators and a track marshal. The FIA subsequently made sweeping changes to the rules and regulations of F1 in an effort to improve safety. The 1994 season would be the last Formula One season to see a fatality caused by an accident until the 2014 season when Jules Bianchi died as a result of his injuries... ddeeb4bf6f Drivers and teams competed for the titles of World Drivers' Champion and World Constructors' Champion respectively. The season was dominated by defending champion Max Verstappen, who cruised to his third consecutive Drivers' Championship title at the Qatar Grand Prix, winning a record 19 out of 22 Grands Prix held and finishing on the podium 21 times (also a record number for most podiums in a season) by the end of the

championship. His team Red Bull Racing achieved their sixth Constructors' Championship title, their second consecutively, at the preceding Japanese Grand Prix.
