Clear-aligner treatment involves an orthodontist or dentist, or with home-based systems, the person themselves, taking a mold of the patient's teeth, which is used to create a digital tooth scan. The computerized model suggests stages between the current and desired teeth positions, and aligners are created for each stage. Each aligner is worn for 22 hours a day for

one or two weeks. These slowly move the teeth into the... 93aa4f8f71 Pure Heroine received generally positive reviews from music critics, many of whom praised its songwriting, production, and Lorde's vocal performance. It appeared on several year-end critics' lists, and was nominated for Best Pop Vocal Album at the 56th Annual Grammy Awards. The album deals with themes of youth and critiques mainstream culture, exploring materialism, fame, consumer culture and social status. Pure Heroine has been noted for its influence on modern pop music. 93aa4f8f71 Mandibular fractures are typically the result of trauma. This can include a fall onto the chin or a hit from the side. Rarely they may be due to osteonecrosis or tumors in the bone. The most common area of fracture is at the condyle (36%), body (21%), angle (20%) and symphysis (14%). Rarely the fracture may occur at the ramus (3%) or coronoid process (2%). While a diagnosis can occasionally be made with plain X-ray, modern CT scans are more accurate. 93aa4f8f71 The Groke is a melancholic and lonely character. She appears as a big dark sheet ghost with a big nose, who passively freezes everything around her. 93aa4f8f71

Hydrogen peroxide (H₂O₂) is the active ingredient most commonly used in whitening products and is delivered as either hydrogen peroxide or carbamide peroxide. Hydrogen peroxide is analogous to carbamide peroxide as it is released when the stable complex is in contact with water. When it diffuses into the tooth, hydrogen peroxide acts as an oxidising agent that breaks down to produce unstable free radicals. In the spaces between the inorganic salts in tooth enamel, these unstable free radicals attach to organic pigment molecules resulting in small, less heavily pigmented components. Reflecting less light, these smaller molecules create a "whitening effect". Peroxyacids are an alternative to hydrogen peroxide and also contribute to the breakdown of pigment molecules. There are different products available on the market to remove stains...

The large eyes of the bigeye thresher are adapted for hunting in low light conditions. It is one of the few sharks that conduct a diel vertical migration, staying in deep water during the day and moving into surface waters at night to feed. To protect its sensitive brain and eyes from the temperature changes accompanying these movements, the bigeye thresher has a vascular exchange system called the rete mirabile around those organs. This species feeds mainly on fish and squid, which are stunned via whip-like strikes of the long tail. Bigeye threshers are ovoviviparous, usually bearing litters of two pups. The embryos are oophagous and feed on ova produced by the mother while... 93aa4f8f71 == Description == 93aa4f8f71

The comic stars a boy named Dennis the Menace and his dog, an "Abyssinian wire-haired tripe hound" named Gnasher 93aa4f8f71

== Description == 93aa4f8f71 The strip first appeared in issue 452 (dated 17 March 1951) and on sale from 12 March 1951. It is the longest-running strip in the comic. The idea and name of the character emerged when the comic's editor heard a British music hall song with the chorus "I'm Dennis the Menace from Venice". The creation of Dennis in the 1950s had sales of The Beano soar. In issue 1678 (dated 14 September 1974), Dennis the Menace replaced Biffo the Bear on the front cover, and it has been there until issue 3961 (dated 17 November 2018). Coincidentally, on 12 March 1951, another comic strip

named Dennis the Menace debuted in the US. As a result of this, the US series has initially been retitled Dennis for British audiences, while the British character's appearances are often titled Dennis and Gnasher outside the United Kingdom. In 2021, Dennis and Gnasher featured on a series of UK postage stamps issued... 93aa4f8f71

The cause of cavities is acid from bacteria dissolving the hard tissues of the teeth (enamel, dentin, and cementum). The acid is produced by the bacteria when they break down food debris or sugar on the tooth surface. Simple sugars in food are these bacteria's primary energy source, and thus a diet high in simple sugar is a risk factor. If tooth demineralization is greater than tooth remineralization from sources such as saliva, caries results. Risk factors include conditions that result in less saliva, such as diabetes mellitus, Sjögren syndrome, and some medications, including psychostimulants, antihistamines... 93aa4f8f71 Immediate surgery is not necessarily required. Occasionally people may go home and follow up for surgery in the next few days. A 2014 systematic review concluded that published studies were of insufficient quality to determine effectiveness.

Experience suggests they are effective for moderate crowding of the front teeth, but less effective than conventional braces for several other issues and are not recommended for children. In particular they are indicated for "mild to moderate crowding (1–6 mm) and mild to moderate spacing (1–6 mm)", in cases where there are no discrepancies of the jawbone. They are also indicated for patients who have experienced a relapse after fixed orthodontic treatment. 93aa4f8f71
