These SIM cards are always used on GSM phones; for CDMA phones, they are needed only for LTE-capable handsets. SIM cards are also used in various satellite phones, smart watches, computers, or cameras. The first SIM cards were the size of credit and bank cards; sizes were reduced several times over the years, usually keeping electrical contacts the same, to fit smaller-sized devices. SIMs are transferable between different mobile devices by removing the card itself. 5827814904 The first floppy disks, invented and made by IBM in 1971, had a disk diameter of 8 inches (200 mm). Subsequently, the 5¼-inch (130 mm) and then the 3½-inch (90 mm) became a ubiquitous form of data storage and data transfer into the first years of the 21st century. By the end of the 1980s, 5¼-inch (130 mm) disks had been superseded by 3½-inch (90 mm) disks. During this time, PCs frequently came equipped with drives of both sizes. By the mid-1990s, 5¼-inch drives had virtually disappeared, the 3½-inch disk became the dominant format. The advantages of the 3½-inch (90 mm) disk were its higher capacity, smaller physical size, and its rigid case which provided better... 5827814904
