

Tensor Fasciae Latae Tfl Muscle

Trees for Life (disambiguation), several reforestation charities a2f2c92934

Tensor fasciae latae muscle The tensor fasciae latae (or tensor fasci e lat e or, formerly, tensor vaginae femoris) is a muscle of the thigh. Together with the gluteus maximus, it The tensor fasciae latae (or tensor fasci e lat e or, formerly, tensor vaginae femoris) is a muscle of the thigh. The muscle assists in keeping the balance of the pelvis while standing, walking, or running. Together with the gluteus maximus, it acts on and is continuous with the iliotibial band, which attaches to the tibia a2f2c92934

In surgical praxis, the abdomen is the primary donor-site for harvesting the tissues to create the free flap, because that region of the woman's body usually contain's sufficient (redundant) adipocyte fat and skin -tissues that are biologically... a2f2c92934

TFL Tasmanian Football League, an Australian rules competition Tensor fasciae latae muscle, a thigh/hip muscle Terry Fox Laboratory, a unit of BC Cancer Agency, Canada TFL or Tfl may refer to: a2f2c92934

TUI fly Netherlands, a Dutch airline (ICAO:TFL) a2f2c92934

Free flap breast reconstruction femoral artery. Breast-reconstruction mammoplasty can sometimes be realised with the application of a pedicled flap of tissue that has been harvested from the latissimus dorsi muscle, which is the broadest muscle of the back, to which the pedicle (“foot”) of the tissue flap remains attached until it successfully grafts to the recipient site, the mastectomy wound. Advantages The fascia lata covering the TFL-muscle is very thick, which Free-flap breast reconstruction is a type of autologous-tissue breast reconstruction applied after mastectomy for breast cancer, without the emplacement of a breast implant prosthesis. As a type of plastic surgery, the free-flap procedure for breast reconstruction employs tissues, harvested from another part of the woman's body, to create a vascularised flap, which is equipped with its own blood vessels. The tensor fasciae latae muscle is located at the lateral upper leg. Moreover, if the volume of breast-tissue excised was of relatively small mass, breast augmentation procedures, such as autologous-fat grafting, also can be applied to reconstruct the breast lost to mastectomy a2f2c92934

== Businesses and organisations == a2f2c92934 == Structure == a2f2c92934 Transport for London (TfL), an English public transport body a2f2c92934 The tensor fasciae latae arises from the anterior part of the outer lip of the iliac crest; from the outer surface of the anterior superior iliac spine, and part of the outer border of the notch below it, between the gluteus medius and sartorius; and from the deep surface of the fascia lata. a2f2c92934 TfL Rail, a former London rail service a2f2c92934 The tensor fasciae latae is inserted between the two layers of the iliotibial tract of the fascia lata about the junction of the middle and upper thirds of the thigh. It tautens the iliotibial tract and braces the knee, especially when the opposite foot is lifted. The terminal insertion point lies on the lateral condyle of the tibia. a2f2c92934
