

Does Allergies Cause Sore Throat

== Common cold == f315a36915

Cold sore The virus may periodically reactivate to create another outbreak of sores in the mouth or lip. Symptoms typically include a burning pain followed by small blisters or sores. The rash usually A cold sore is a type of herpes infection caused by the herpes simplex virus that affects primarily the lip. The first attack may also be accompanied by fever, sore throat, and enlarged lymph nodes. burning pain followed by small blisters or sores. The rash usually heals within ten days, but the virus remains dormant in the trigeminal ganglion. The first attack may also be accompanied by fever, sore throat, and enlarged lymph nodes f315a36915

Strep throat is spread by respiratory droplets from an infected person, spread by talking, coughing or sneezing, or by touching something that has droplets on it and then touching the mouth, nose, or eyes. It may be spread directly through touching infected sores. It may also be spread by contact with skin infected with group A strep. The diagnosis is made based on the results of a rapid antigen detection test or throat culture. Some people may carry the bacteria without symptoms. f315a36915 Prevention is by frequent hand washing, and not sharing eating utensils. There is no vaccine for the disease. Treatment with antibiotics is only recommended in those with a confirmed... f315a36915 == Signs and symptoms == f315a36915 Allergens are categorized on this page by origin for minimal redundancy. Symptoms typically depend on route of exposure, which is not yet sorted cleanly here. f315a36915

Throat irritation The symptoms are unpleasant and usually temporary, but occasionally signifies a more serious health issue, such as laryngitis. laryngitis. Many individuals have allergies to pet dander, dust, mites, pollen Throat irritation can refer to a dry cough, a scratchy feeling at the back of the throat, a sensation of a lumpy feeling, something stuck at the back of the throat, or possibly a feeling of dust in the throat. During the summer months, allergies are a common cause of throat irritation f315a36915

Mometasone furoate is used in the treatment of inflammatory skin disorders... f315a36915

Laryngitis The accompanying symptoms depend on the primary cause. Typically, these last under 2 weeks. Laryngitis can be caused by overuse of the vocal chords, or by other inflammation, trauma, or infection. Because laryngitis can have various causes, other signs and symptoms may vary. The primary symptom is loss of some vocal function, ranging from hoarse voice to no voice at all. They can include: Dry or sore throat Coughing (both a causal factor and Laryngitis is inflammation of the larynx (voice box) f315a36915

The World Health Organization and International Union of Immunological Societies (WHO/IUIS) Allergen Nomenclature... f315a36915

Allergy to cats The second most common is Fel d 2; this type is triggered by airborne dead skin flakes (dander) and their presence in the smell of cat urine. Among the eight known cat allergens, the most prominent Allergies to cats, a type of animal allergy, is one of the most common allergies experienced by humans. Among the eight known cat allergens, the most prominent allergen is secretoglobulin Fel d 1, which is produced in the anal glands, salivary glands, and, mainly, in sebaceous glands of cats, and is ubiquitous in the United States, even in households without cats. Due to cats' grooming habits, the saliva is distributed to other areas of the animal, such as the hair and skin, increasing the impact of the allergen. Allergies to cats, a type of animal allergy, is one of the most common allergies experienced by humans f315a36915

Most cases are caused by a viral infection. Strep throat, a bacterial infection, is the cause in about 25% of children and 10% of adults. Uncommon causes include other bacteria such as gonococcus, fungi, irritants such as smoke, allergies, and gastroesophageal reflux disease. Specific testing is not recommended in people who have clear symptoms of a viral infection, such as a cold. Otherwise, a rapid antigen detection test or throat swab is recommended. PCR testing has become common as it is as good as taking a throat swab but gives a faster result. Other conditions that can produce similar symptoms include epiglottitis, thyroiditis, retropharyngeal abscess, and occasionally heart disease. f315a36915 About 2.5 per 1000 people are affected... f315a36915 == Signs and symptoms == f315a36915

Streptococcal pharyngitis Common symptoms include fever, sore throat, red tonsils, and enlarged lymph nodes in the front of the neck. Some develop a sandpaper-like rash which is known as scarlet fever. known as streptococcal sore throat (strep throat), is pharyngitis (an infection of the pharynx, the back of the throat) caused by Streptococcus pyogenes Streptococcal pharyngitis, also known as streptococcal sore throat (strep throat), is pharyngitis (an infection of the pharynx, the back of the throat) caused by Streptococcus pyogenes, a gram-positive, group A streptococcus. Symptoms typically begin one to three days after exposure and last seven to ten days. A headache and nausea or vomiting may also occur f315a36915

The cause is usually herpes simplex virus type 1 (HSV-1) and occasionally herpes simplex virus type 2 (HSV-2). The infection is typically spread between people by direct non-sexual contact. Attacks can be triggered by sunlight, fever, psychological stress, or a menstrual period. Direct contact with the genitals can result in genital herpes. Diagnosis is usually based on symptoms but can be confirmed with specific testing. f315a36915 NSAIDs, such as ibuprofen, can be used to help with the pain. Numbing... f315a36915

== Medical uses == f315a36915 Common side effects when used for asthma include headache, sore throat, and thrush. It is therefore recommended to rinse the mouth after use. Long-term use may increase the risk for glaucoma and cataracts. Common side effects when used in the nose include upper respiratory tract infections and nose bleeds. Common side effects when applied on the skin include acne, skin atrophy, and itchiness. It works by decreasing inflammation. f315a36915 Mometasone furoate was patented in 1981 and came into medical use in 1987. It is on the World Health Organization's List of Essential Medicines and is available as a generic medication. In 2023, it was the 272nd most commonly prescribed medication in the United States, with more than 800,000 prescriptions. f315a36915 An allergy is a misguided type-I hypersensitivity response triggered by binding of an allergen to immunoglobulin E (IgE) antibodies. f315a36915 This list also includes some other forms of hypersensitivity reactions, especially so-called allergic contact dermatitis (ACD), a type-IV hypersensitivity response. Such a response is not associated with IgE action, but T-cell activation. The prototypic example is Urushiol-induced contact dermatitis. f315a36915 Symptoms of an allergic reaction to animals may include itchy skin, nasal congestion, itchy nose, sneezing, chronic sore throat or itchy throat, swollen, red, itchy, and watery eyes, coughing, asthma, or rash on the face or chest. f315a36915 Approximately 35% of childhood sore throats and 5–25% of cases in adults are caused by a bacterial infection from group A streptococcus. Sore throats that are "non-group A streptococcus" are assumed to be caused by a viral infection. Sore throat is a common reason for people to visit their primary care doctors and the top reason for antibiotic prescriptions by primary care practitioners such as family doctors. In the United States, about 1% of all visits to the hospital emergency department... f315a36915

Mometasone Currently only mometasone furoate is used in medical products. spray form of mometasone may cause the following side effects: headache Viral upper respiratory infections sore throat nose bleeds cough muscle and joint Mometasone and its derivate mometasone furoate are steroids (specifically, glucocorticoids), medications used to treat certain skin conditions, hay fever, and asthma. They can be applied to the skin, inhaled, or used in the nose. Specifically, they are used to prevent, rather than treat, asthma attacks f315a36915

Animal allergy It is a common type of allergy. chronic sore throat or itchy throat, swollen, red, itchy, and watery eyes, coughing, asthma, or rash on the face or chest. [citation needed] Allergies are In medicine, animal allergy is hypersensitivity to certain substances produced by animals, such as the proteins in animal hair and saliva f315a36915

Allergic symptoms associated with cats include coughing, wheezing, chest tightening, itching, nasal congestion, rash, watery eyes, sneezing, chapped lips, and similar symptoms. In worst-case scenarios, allergies to cats can develop into severe respiratory symptoms such as rhinitis and mild to severe forms of asthma. Despite these symptoms, there are many types of solutions to mitigate the allergic effects of cats, including medications, vaccines, and home remedies. Hypoallergenic cats are another solution for individuals who want pets... f315a36915

Pharyngitis Pharyngitis is a type of upper respiratory tract infection. Other symptoms may include a runny Pharyngitis is inflammation of the back of the throat, known as the pharynx. It typically results in a sore throat and fever. It typically results in a sore throat and fever. Complications can include sinusitis and acute otitis media. Pharyngitis is inflammation of the back of the throat, known as the pharynx. Other symptoms may include a runny nose, cough, headache, difficulty swallowing, swollen lymph nodes, and a hoarse voice. Symptoms usually last 3–5 days, but can be longer depending on cause f315a36915

For sore throat caused by bacteria (GAS), treatment with antibiotics may help the person get better faster, reduce the risk that the bacterial infection spreads, prevent retropharyngeal abscesses and quinsy, and reduce the risk of other complications such as rheumatic fever and rheumatic heart disease. In most developed countries, post-streptococcal diseases have become far less common. For this reason, awareness and public health initiatives to promote minimizing the use of antibiotics for viral infections have become the focus. f315a36915 Prevention includes avoiding kissing or using the personal items of a person who is infected. A zinc oxide, anesthetic, or antiviral cream appears to decrease the duration of symptoms by a small amount. Antiviral medications may also decrease the frequency of outbreaks. f315a36915 Antibody reactions require a molecule of sufficient size. As a result, most allergens are large biomolecules such as proteins and carbohydrates, many of which can be removed or broken down by food processing. A smaller molecule may still become allergenic by binding to a larger molecule to form an epitope of sufficient size; such a small molecule is called a hapten. f315a36915

Sore throat Sore throat, also known as throat pain, is pain or irritation of the throat. The majority of sore throats are caused by a virus, for which antibiotics are not helpful. The majority of sore throats are caused by a virus, for which antibiotics Sore throat, also known as throat pain, is pain or irritation of the throat f315a36915

The primary symptom of laryngitis is a hoarse voice or aphonia, when there is no sound at all. Because laryngitis can have various causes, other signs and symptoms may vary. They can include: f315a36915
