

What Is A Nurse Practitioner Do

Nurse practitioner NPs are trained to assess patient needs, order A nurse practitioner (NP) is an advanced practice registered nurse and a type of mid-level practitioner. NPs are trained to assess patient needs, order and interpret diagnostic and laboratory tests, diagnose disease, prescribe medications, and formulate treatment plans. NP training covers basic disease prevention, coordination of care, and health promotion. A nurse practitioner (NP) is an advanced practice registered nurse and a type of mid-level practitioner

== History ==

Emergency nursing condition. Emergency nurses also tend to patients with acute alcohol and/or drug intoxication, psychiatric and behavioral problems and those who have been raped. In fact, only a small percentage of emergency department (ED) patients have emergency conditions such as a stroke, heart attack or major trauma. Managing an ED patient's care includes Emergency nursing is a specialty within the field of professional nursing focusing on the care of patients who require prompt medical attention to avoid long-term disability or death. In addition to addressing "true emergencies," emergency nurses increasingly care for people who are unwilling or unable to get primary medical care elsewhere and come to emergency departments for help. Planning and managing care. The ED nurse must have a plan of what to do for the patient, when and in what order

== History == GPs work at the heart of their communities, striving to provide comprehensive and equitable care for everyone, taking into account their health care needs, stage of life and background. GPs work in, connect with and lead multidisciplinary teams that care for people and their families, respecting the context in which they live, aiming to ensure all of their physical health and mental health needs are met. They are trained to treat patients to levels of complexity that vary between countries. == History == The ACNP is a licensed independent practitioner and may autonomously provide care. Whenever appropriate, the ACNP considers formal consultation and/or collaboration involving patients, caregivers, nurses, physicians, and other members of the interprofessional... == The history of emergency nursing ==

Mid-level practitioner and treat patients but do not have formal education or certification as a physician. The scope of a mid-level practitioner varies greatly among countries Mid-level practitioners, also called non-physician practitioners, advanced practice providers, or commonly mid-levels, are health care providers who assess, diagnose, and treat patients but do not have formal

education or certification as a physician. The legal scope of practice for mid-level practitioners varies greatly among jurisdictions, with some having a restricted and well-defined scope, while others have a scope similar to that of a physician. The scope of a mid-level practitioner varies greatly among countries and even among individual practitioners. Likewise, the training requirement for mid-level practitioners varies greatly between and within different certifications and licensures. Some mid-level practitioners work under the close supervision of a physician (such as doing pre-op and post-op assessment and management, thus allowing surgeons to spend more of their time operating), while others function independently and have a scope of practice difficult to distinguish from a physician a395b81813

== Education == a395b81813 The first modern day NICU opened in 1960 at Yale-New Haven Hospital under the auspices of Louis Gluck, a pioneer in the emerging pediatric specialty, neonatology. Gluck's NICU concept demonstrated... a395b81813 Emergency nurses are most frequently employed in hospital emergency departments, although they may also work in urgent care centers, sports arenas, and on medical transport aircraft and ground ambulances. a395b81813 Becoming a pediatric nurse practitioner can take anywhere from 7-10 years, depending on the route taken. First, one must earn a Bachelor of Science in Nursing (BSN) by attending a four-year bachelor's degree program at an accredited college or university, majoring in nursing. After completing their BSN, they must take the National Council Licensure Examination (NCLEX) to obtain their registered nurse (RN) license. After completing and passing the NCLEX, they must gain experience in the nursing field, preferably in pediatrics. Recommended experience is anywhere from 1... a395b81813

Psychiatric-mental health nurse practitioner The PMHNP has a focus on psychiatric diagnosis, including the differential diagnosis of medical disorders with psychiatric symptoms, and on medication treatment for psychiatric disorders. They are licensed to provide emergency psychiatric services, psychosocial and physical assessments of their patients, treatment plans, and manage patient care. the United States, a psychiatric-mental health nurse practitioner (PMHNP) is an advanced practice registered nurse trained to provide a wide range of mental In the United States, a psychiatric-mental health nurse practitioner (PMHNP) is an advanced practice registered nurse trained to provide a wide range of mental health services to patients and families in a variety of settings. PMHNP's diagnose, conduct therapy, and prescribe medications for patients who have psychiatric disorders, medical organic brain disorders or substance abuse problems. They may also serve as consultants or as educators for families and staff a395b81813

Pediatric nurse practitioner This care is provided to support optimal health of children within their community. Nurse practitioners have an in-depth knowledge and experience in pediatric healthcare including well childcare, and prevention/management of common pediatric acute illnesses and chronic

conditions. A pediatric nurse practitioner (PNP) is a nurse practitioner who specializes in care for newborns, infants, toddlers, preschoolers, school-aged children. A pediatric nurse practitioner (PNP) is a nurse practitioner who specializes in care for newborns, infants, toddlers, preschoolers, school-aged children, adolescents, and young adults. In order to be a pediatric nurse practitioner, one must be compassionate, resourceful, good at communicating and have good attention to detail. a395b81813

Emergency Care Practitioner educated to provide less comprehensive services than a physician, physician associate or nurse practitioner, however are ideal for acute non urgent situations. An Emergency Care Practitioner (ECP) generally come from a background in paramedicine and most have additional academic qualifications, usually at university, with enhanced skills in medical assessment and extra clinical skills over and above those of a standard paramedic or qualified nurse. Evidence however clearly demonstrates that in discreet groups of patients the use of these extended role staff responding to emergency calls can reduce admissions and thus improve patient outcomes as well as delivering a clear cost saving to the NHS. Evidence of the best way to target Emergency Care Practitioners is limited with utilisation of traditional Ambulance dispatch codes not always being shown to be most effective and referrals from GPs also potentially failing to deliver management of demand that would be appropriate for this different level of practitioner. It has been recommended by the College of Paramedics that ECPs be trained to PgDip or MSc level, although not all are. a395b81813

Because of their diverse histories, mid-level providers' training, functions, scope of practice, regulation, and integration into the formal health system vary from country to country. They... a395b81813

Nurse anesthetist They are also concerned with patient advocacy, safety and professional development. A nurse anesthetist is an advanced practice nurse who administers anesthesia for surgery or other medical procedures. They are involved in the administration. A nurse anesthetist is an advanced practice nurse who administers anesthesia for surgery or other medical procedures. The International Federation of Nurse Anesthetists was established in 1989 as a forum for developing standards of education, practice, and a code of ethics. In some localities, nurse anesthetists provide anesthesia to patients independently; in others they do so under the supervision of physicians. They are involved in the administration of anesthesia in a majority of countries, with varying levels of autonomy, which may include some or all anesthesia services before, during, and after surgery. a395b81813

== Employment == a395b81813 A core element in general practice is continuity... a395b81813 Around the 1800s hospitals became more popular and there was a growth in emergency care. The first development of an emergency room was originally called the "First Aid Room." Originally, nurses only dressed wounds, applied eye ointments, treated minor burns with salves and... a395b81813

General practitioner GPs have distinct expertise and experience in providing whole person medical care. A general practitioner (GP) is a doctor who practices general medicine. The term primary care physician is used in the United States. Generally, they participate more in outpatient care as opposed to inpatient care. GPs have distinct expertise and experience in providing whole person medical care, whilst managing the complexity, uncertainty and risk associated with the continuous care they provide. By contrast with specialist physicians, GPs do not have a specific specialist area; they can diagnose and treat many different conditions, while also determining when a patient needs to see a doctor with more specialised training in a particular area. a395b81813

Acute care nurse practitioner The purpose of the ACNP is to provide advanced nursing care across the continuum of health care services to meet the specialized physiologic and psychological needs of patients with acute, critical, and/or complex chronic health conditions. This program includes supervised clinical practice to acquire advanced knowledge, skills, and abilities. A nurse practitioner (ACNP) is a registered nurse who has completed an accredited graduate-level educational program that prepares them as a nurse practitioner. An acute care nurse practitioner (ACNP) is a registered nurse who has completed an accredited graduate-level educational program that prepares them as a nurse practitioner. This care is continuous and comprehensive and may be provided in any setting where the patient may be found. This education and training qualifies them to independently: (1) perform comprehensive health assessments; (2) order and interpret the full spectrum of diagnostic tests and procedures; (3) use a differential diagnosis to reach a medical diagnosis; and (4) order, provide, and evaluate the outcomes of interventions. a395b81813

A PMHNP is trained to practice autonomously. In 27 US states, nurse practitioners (NPs) already diagnose and treat without the supervision of a psychiatrist. This is in contrast to 2008, when nurse practitioners could autonomously diagnose and treat in 23 states, and could only prescribe in 12 states. In other states, PMHNPs have reduced or restricted practice, requiring a collaborative... a395b81813

Neonatal nurse practitioner The National Association of Neonatal Nurse Practitioners (NANNP) is the national association that represents neonatal nurse practitioners in the United States. In the United States, a board certified neonatal nurse practitioner (NNP-BC) is an APRN who has acquired graduate education at the master's or doctoral level and has a board certification in neonatology. A neonatal nurse practitioner (NNP) is an advanced practice registered nurse (APRN) with at least 2 years experience as a bedside registered nurse in a Level III NICU, who is prepared to practice across the

continuum, providing primary, acute, chronic, and critical care to neonates, infants, and toddlers through age 2. Primarily working in neonatal intensive care unit (NICU) settings, NNPs select and perform clinically indicated advanced diagnostic and therapeutic invasive procedures. Certification is governed by the National Certification Corporation for Obstetrics, Gynecologic and Neonatal Nursing Specialties (NCC) a395b81813

ECPs may be employed in a range of areas of care such as emergency medical services, primary care centres, hospitals, prisons, walk-in centres, or out-of-hours medical centres. The majority of ECPs... a395b81813
