Rice production in China bread, and fermented food. Ground rice can range in colour when made out of red, purple, and brown types of rice. Rice can be used as a base for alcoholic Rice production in China is the amount of rice planted, grown, and harvested for consumption in the mainland of China f18e0ee667

It is an important part of the national economy, where it is the world's second-largest producer of rice as of 2025. It produces the highest rice yields in Asia, at 6.5 metric tons per hectare (2.6 long ton/acre; 2.9 short ton/acre). Rice is produced throughout the nation and is believed to have been first domesticated in the surrounding regions of the Yangtze River and the Yunnan-Guizhou highlands of Southern China. Rice is believed to have been first cultivated around the Yangtze River Valley and Yellow River 11,000 years ago, and found upon clustering in the middle of the Yangtze River in the provinces of Hubei and Hunan in

central China according to archaeological records. Rice production in China uses techniques, such as turning soil into mud to prevent water loss, as well as seed transplantation.
