

Can Men Go Through Menopause

There are both hormonal and non-hormonal treatments to prevent the negative effects of low estrogen levels and improve quality of life. b70d25e9f1 == Education == b70d25e9f1

Disability and women's health " It has been noted that the women with disabilities face obstacles and hardships and cannot access the same medical resources as those without. Article 25 of the Convention on the Rights of Persons with Disabilities specifies that "persons with disabilities have the right to the enjoyment of the highest attainable standard of health without discrimination on the basis of disability. at risk for osteoporosis. Women with various disabilities Article 12 of the United Nations Convention on the Elimination of All Forms of Discrimination against Women outlines women's protection from gender discrimination when receiving health services and women's entitlement to specific gender-related healthcare provisions. Women with ID and Down syndrome often go through menopause at an earlier age than other women b70d25e9f1

== Signs and symptoms... == b70d25e9f1 He was born in Queens, New York City, on June 3, 1948. His father and brother spent several years in Sing Sing, but he broke the family tradition and went to graduate school to study psychology. He studied social psychology under Robert B. Cialdini and received his Ph.D. from Arizona State University in 1976. He has edited several books on evolutionary psychology, contributed chapters to the Handbook of Social Psychology and the Handbook of Evolutionary Psychology, and been an author of two multi-edition textbooks (Psychology, with John Seamon; and Social Psychology: Goals in Interaction, with Steven Neuberg and Robert B. Cialdini). He writes a blog for Psychology Today magazine, titled Sex, Murder, and the Meaning of Life, and has published... b70d25e9f1 Fezolinetant was approved for medical use in the United States in May 2023, and it was approved in the European Union in December 2023. Fezolinetant is the first NK3 receptor antagonist approved by the US Food and Drug Administration (FDA) to treat moderate to severe hot flashes from menopause. The FDA considers it to be a first-in-class medication. b70d25e9f1 The patriarch hypothesis incorporates these neglected areas. It suggests selection pressure on male longevity extended the female lifespan; whose adjustment of life history has been constrained by the size of the ovaries – resulting in human females surviving beyond the age at which they can reproduce. With an extension of the post-reproductive female life stage, they could enhance their inclusive fitness by giving kin assistance. This way, with no choice in the timing of fertility termination, females are optimising an essentially bad situation. b70d25e9f1

Menopause Menopause before the age of 45 years is considered to be "early menopause", and ovarian failure or surgical removal of the ovaries before the age of 40 years is termed "premature ovarian insufficiency". natural part of aging, it can also be a result of surgery, or have another medical or non-medical source. Surgical menopause occurs as the result of a surgery that removes both ovaries. Natural menopause typically occurs between the ages of 45 and 55, although the exact timing can vary, occurring earlier or later for a variety of reasons. Additionally a decrease in

hormone levels can have other sources, including some types of chemotherapy. Women often notice symptoms of hormonal changes prior. Natural menopause is the result of a decrease in the production of the hormones estrogen and progesterone. Menopause is the time when menstrual periods permanently stop, marking the end of the reproductive stage for the female human. Natural menopause is the result of a decrease in the production of the hormones estrogen and progesterone. Smoking cigarettes may result in an earlier menopause while having been pregnant may result in a later menopause. Menopause is a natural part of aging, it can also be a result of surgery, or have another medical or non-medical source. At the physiological level, menopause happens because of a decrease in the ovaries' production of the hormones estrogen and progesterone b70d25e9f1

Traditionally, men have been used to model and test health therapeutics. Many medical professionals used believed that men and women functioned the same way physically and anatomically. Therefore, previous research used male traits to correlate to... b70d25e9f1 In 1992, George earned a First-Class Honours BA in Modern Languages from Somerville College, Oxford, followed by an MA in international politics in 1994 at the University of Pennsylvania, as a Thouron Scholar and Fulbright Fellow. b70d25e9f1 == Biography == b70d25e9f1 The high cost of female investment in offspring may lead to physiological deteriorations that amplify susceptibility to becoming infertile. This hypothesis suggests the reproductive lifespan in humans has been optimized, but it has proven more difficult in females and thus their reproductive span is shorter. If this hypothesis were true, however, age at menopause should be negatively correlated with the amount of energy expended to maintain the reproductive organs, and the available data does not support this. b70d25e9f1 A recent increase in female longevity due to improvements in the standard of living and social care has also been suggested... b70d25e9f1 For more information on this, see Women's health. b70d25e9f1

Fezolinetant It is a small-molecule, selective neurokinin-3 (NK3) receptor antagonist taken by mouth. vasomotor symptoms due to menopause. It was developed by Astellas Pharma, which acquired it from Ogeda (formerly Euroscreen) in April 2017. In September 2024, the US FDA added a warning to the prescribing label that fezolinetant can cause rare but serious Fezolinetant, sold under the brand name Vezoh, among others, is a medication used for the treatment of hot flashes (vasomotor symptoms) due to menopause b70d25e9f1

While the CDC reports that 36 million women in the world have disabilities, they often do not receive the same quality of healthcare. Women with disabilities are entitled to equal access to reproductive healthcare. b70d25e9f1

Elizabeth Sher Sacks Melinda. "When Women Go Through Menopause, Where Do Men Go." Library Journal, March 1, 1997, p. The San Francisco Examiner described her early short films as "witty combinations" of music and imagery, formal experimentation, clever editing and rewarding interviews, "infused with arch satire"; Amalia Mesa-Bains wrote that her documentaries create "that special mix of common sense, irony and human insight [that] inspires us to talk more, laugh a lot and trust each other. Her art has been exhibited internationally and belongs." "Local Film Shows Life Through Women's Eyes Elizabeth Sher (born 1943) is an American visual artist, known for eclectic short films, documentaries about women, art, aging and health,

and mixed-media artwork employing digital and analog modes. Her films combine humor, honesty and an interest in everyday experiences; while not strictly autobiographical, her work often explores issues that parallel her own life cycle. 115. " Sher's films have screened at the Kennedy Center and the London, Edinburgh, Hong Kong and Raindance international film festivals, and been broadcast on PBS and public television networks throughout the world; they have been recognized with awards from the American Film Institute, National Education Media Arts Fest, and the Mill Valley and Bare Bones International film festivals, among others b70d25e9f1

Patriarch hypothesis It is an alternative theory to the grandmother hypothesis which tends to ignore male benefits of continued spermatogenesis and their roles in assistance. it's supposed to prove. The author starts with the fact that women go through menopause to reach a conclusion of male longevity instead of trying to prove The patriarch hypothesis is a hypothesis that explains the occurrence of menopause in human females and how a long post-fertile period (up to one third of a female's life-span) could confer an evolutionary advantage b70d25e9f1

Frank Marlowe first put forward the patriarch hypothesis. He postulates that if women survive beyond an age at which they can reproduce and men continue spermatogenesis, then old males can benefit greatly if they can copulate with younger females. It is theorised that increased... b70d25e9f1

Hypoestrogenism A variety of conditions can Hypoestrogenism, or estrogen deficiency, refers to a lower than normal level of estrogen. Estrogen deficiency is also associated with an increased risk of cardiovascular disease, and has been linked to diseases like urinary tract infections and osteoporosis. (menopausal) ages by five to ten years compared with men. Females are also at higher risk for osteopenia and osteoporosis. It is an umbrella term used to describe estrogen deficiency in various conditions b70d25e9f1

Evolution of menopause These attempt to suggest evolutionary benefits to the human species stemming from the cessation of women's reproductive capability before the end of their natural lifespan and can be categorized as adaptive and non-adaptive. Few other animals have a menopause; humans are joined by just four species There are various theories on the origin and process of the evolution of menopause. Few other animals have a menopause; humans are joined by just four species in which females live substantially longer than their ability to reproduce, all cetaceans (beluga whales, narwhals, orcas and short-finned pilot whales). end of their natural lifespan and can be categorized as adaptive and non-adaptive b70d25e9f1

== Non-adaptive hypotheses == b70d25e9f1

Sexual frustration It is a natural stage of the development throughout youth, when going through puberty. It can also affect the sexually active, especially hypersexual people b70d25e9f1

In women, low levels of estrogen may cause symptoms such as hot flashes, sleeping disturbances, decreased bone health, and changes in the genitourinary system. Hypoestrogenism is most commonly found in women who are postmenopausal, have primary ovarian insufficiency (POI), or are presenting with amenorrhea (absence of menstrual periods). Hypoestrogenism includes

primarily genitourinary effects, including thinning of the vaginal tissue layers and an increase in vaginal pH. With normal levels of estrogen, the environment of the vagina is protected against inflammation, infections, and sexually transmitted infections. Hypoestrogenism can also occur in men, for instance due to hypogonadism. The most common side effects of fezolinetant include abdominal pain, diarrhea, insomnia, back pain, hot flush, and elevated hepatic transaminases.

Douglas T. Kenrick His research and writing integrate three scientific syntheses of the last few decades: evolutionary psychology, cognitive science, and dynamical systems theory. and early twenties, and go through menopause later, men are attracted to cues associated with fertility, not to youth, per se. Men contribute resources to Douglas T. He is the author of over 170 scientific articles, books, and book chapters, the majority applying evolutionary ideas to human cognition and behavior. Kenrick (born 1948) is an American psychologist who is professor of psychology at Arizona State University

Fezolinetant is indicated for the treatment of moderate to severe vasomotor symptoms due to menopause.

Rose George The Guardian. The Atlantic. George, Rose (16 August 2018). "It feels impossible to beat"; How I was floored by menopause". Aren't Just Small Men". She has explored topics such as refugees, sanitation, shipping, blood and fish in her books. Sandhu Rose George is a British journalist and author
