

Selective Estrogen Receptor Modulators

Estrogen deprivation therapy antiestrogens or estrogen blockers such as selective estrogen receptor modulators (SERMs) such as tamoxifen, selective estrogen receptor degraders such as 2b840f20a7

Nonsteroidal estrogen On the other hand, virtually all selective estrogen receptor modulators (SERMs) are nonsteroidal, with triphenylethylenes like tamoxifen. now almost never used 2b840f20a7

Selective estrogen receptor modulator g. , full agonists and silent antagonists), SERMs are more tissue-specific, allowing them to

selectively inhibit or stimulate estrogen-like action in various tissues. Selective estrogen receptor modulators (SERMs), also known as estrogen receptor agonists/antagonists (ERAAs), are a class of drugs that act on estrogen Selective estrogen receptor modulators (SERMs), also known as estrogen receptor agonists/antagonists (ERAAs), are a class of drugs that act on estrogen receptors (ERs). Tissue-selective estrogen complex tissue-selective estrogen complex (TSEC) is a combination of an estrogen, such as estradiol or conjugated estrogens, and a selective estrogen receptor modulator 2b840f20a7

SERMs are also being explored for gender-affirming hormone therapy in some non-binary transgender individuals that were assigned male at birth. Unlike full estrogen receptor agonists like estradiol which cause the broad development of feminine secondary sex characteristics, SERMs can be used to achieve partial feminization in individuals who wish... 2b840f20a7

Selective Estrogen Receptor Modulators

receptors (ERs) are proteins found in cells that function as receptors for the hormone estrogen (17 β -estradiol) 2b840f20a7

Selective progesterone receptor modulator A selective progesterone receptor modulator (SPRM) is an agent that acts on the progesterone receptor (PR), the biological target of progestogens like 2b840f20a7

== Medical uses == 2b840f20a7 SERMs are used for various estrogen-related diseases, including treatment of ovulatory dysfunction in the management of infertility treatment, prevention of postmenopausal osteoporosis, treatment and risk reduction of breast cancer, and treatment of dyspareunia due to menopause. SERMs are also used in combination with conjugated estrogens indicated for the management of estrogen deficiency symptoms and of vasomotor symptoms associated with menopause. 2b840f20a7
