Cestoda Most of the species—and the best-known—are those in the subclass Eucestoda; they are ribbon-like worms as adults, commonly known as tapeworms. as a human, its definitive host. Their bodies consist of many similar units known as proglottids—essentially packages of eggs which are regularly shed into the environment to infect other organisms. Species of the other subclass, Cestodaria, are mainly fish-infecting parasites. Proglottids leave the body through the anus and fall to the ground, where they may be eaten with grass by a grazing animal Cestoda is a class of parasitic worms in the flatworm phylum (Platyhelminthes) 87b7fddf06

Ulcerative colitis Often, symptoms come on slowly and can range from mild to severe. Complications may include abnormal dilation of the colon (megacolon), inflammation of the eye, joints, or liver, and colon cancer. Weight loss, fever, and anemia may also occur. The primary symptoms of active disease are abdominal pain and diarrhea mixed with blood (hematochezia). Symptoms typically occur intermittently with periods of reduced or absent clinical symptoms between flares, though persistent functional symptoms can remain during remission. be asymptomatic or experience redness, burning, or itching in the eyes. It is a long-term condition that results in inflammation and ulcers of the colon and rectum. Heroin The onset of effects is usually rapid and lasts for a few hours. Heroin is used medically in several countries to relieve pain, such as during childbirth or a heart attack. Common side effects include Heroin, also known as diacetylmorphine and diamorphine among other names, is a morphinan opioid substance synthesized from the dried latex of the opium poppy; it is mainly used as a recreational drug for its euphoric effects. Black tar heroin is a variable admixture of morphine derivatives—predominantly 6-MAM (6-monoacetylmorphine), which is the result of crude acetylation during clandestine production of street heroin. subcutaneous injection, as well as orally in the form of tablets. Various white and brown powders sold illegally around the world as heroin are routinely diluted with cutting agents. Medical-grade diamorphine is used as a pure hydrochloride salt 87b7fddf06

During sexual intercourse, the vaginal walls produce vaginal lubrication and create friction which stimulates the penis toward ejaculation, enabling fertilization. Along with pleasure and bonding, sexual activity can cause sexually transmitted infections (STIs), which can be prevented by safe sex practices. Other health issues may also affect the human vagina. 87b7fddf06 The disease is typically spread by direct genital contact with the skin surface or secretions of someone who is infected. This may occur during sex, including anal, oral, and manual sex. Sores are not required for transmission to occur. The risk of spread between a couple is about 7.5% over a year. HSV is classified into two types, HSV-1 and HSV-2. While historically HSV-2 was more common, genital HSV-1 has become more common in the developed world. Diagnosis may occur by testing lesions using either PCR or viral culture or blood tests for specific antibodies. 87b7fddf06

Ileo-anal pouch Discomfort, including experiencing itching and/or burning around the anus' opening, can be treated with creams In medicine, the ileal pouch-anal anastomosis (IPAA), also known as restorative proctocolectomy (RPC), ileal-anal reservoir (IAR), an ileo-anal pouch, ileal-anal pullthrough, or sometimes referred to as a J-pouch, S-pouch, W-pouch, or a pelvic pouch, is an anastomosis of a reservoir pouch made from ileum (small intestine) to the anus, bypassing the former site of the colon in cases where the colon and rectum have been removed. The pouch retains and restores functionality of the anus, with stools passed under voluntary control of the person, preventing fecal incontinence and serving as an alternative to a total proctocolectomy with ileostomy. aggressive on the skin around the anus 87b7fddf06

During a total proctocolectomy, a surgeon removes a person's diseased colon, rectum, and anus. For the ileostomy, the end of the small intestine is brought to the surface of the body through an opening in the abdominal wall for waste to be removed. People with ileostomies wear an external bag, also known as an ostomy system or stoma appliance, to collect waste which can be emptied and

Vagina The vagina also channels menstrual flow, which occurs in humans and closely related primates as part of the menstrual cycle. The vaginal introitus is normally partly covered by a thin layer of mucosal tissue called the hymen. In humans, it extends from the vulval vestibule to the cervix (neck of the uterus). vaginal walls), which can lead to vaginal itching, burning, bleeding, soreness, or vaginal dryness (a decrease in lubrication). : vaginas or vaginae) is the elastic, muscular reproductive organ of the female genital tract through which mammals copulate and give birth. The cause of UC is unknown. Theories involve immune system dysfunction, genetics, changes in the normal gut bacteria, and environmental factors. Rates tend to be higher in the developed world with some proposing this to be the result of less exposure to intestinal infections, or to a Western diet and lifestyle. The removal of the appendix at an early age may be protective. Diagnosis is typically by colonoscopy, a type of endoscopy, with tissue biopsies... 87b7fddf06 The vagina has evoked strong reactions in societies throughout history, including negative perceptions and language, cultural taboos, and their use as symbols for female sexuality, spirituality, or regeneration of life. In common speech, the word "vagina" is often used incorrectly to refer to the vulva or to the female genitals in general. 87b7fddf06 All cestodes are parasitic; many have complex life histories, including a stage in a definitive (main) host in which the adults grow and reproduce, often for years, and one or two intermediate stages in which the larvae develop in other hosts.

Typically the adults live in the digestive tracts of vertebrates, while the larvae often live in the bodies of other animals, either vertebrates or invertebrates. For example, Diphyllbothrium has at least two intermediate hosts, a crustacean and then one or more
