

Nonobstructive Bowel Gas Pattern

Caroli disease is distinct from other diseases that cause ductal dilatation caused by obstruction, in that it is not one of the many choledochal cyst derivatives. f9d5e64d4d

Caroli disease The second form is more diffuse, and when associated with portal hypertension and congenital hepatic fibrosis, is often referred to as "Caroli syndrome". The disease affects about one in 1,000,000 people, with more reported cases of Caroli syndrome than of Caroli disease. The underlying differences between the two types are not well understood. used to distinguish the difference between stones and widened ducts. Bowel gas and digestive habits make it difficult to obtain a clear sonogram, so Caroli disease (communicating cavernous ectasia, or congenital cystic dilatation of the intrahepatic biliary tree) is a rare inherited disorder characterized by cystic dilatation (or ectasia) of the bile ducts within the liver. Caroli disease is also associated with liver failure and polycystic kidney disease. There are two patterns of Caroli disease: focal or simple Caroli disease consists of abnormally widened bile ducts affecting an isolated portion of liver f9d5e64d4d

== Signs and symptoms == f9d5e64d4d The first symptoms typically include fever, intermittent abdominal pain, and an enlarged liver. Occasionally, yellow discoloration of the skin occurs. Caroli disease usually occurs in the presence of... f9d5e64d4d
