

Word Document Equally Spaced Text Blocks

This article primarily addresses styles for free-form programming languages. As the name implies, such language code need not follow an indentation style. Indentation is a secondary notation that is often intended to lower cognitive load for a programmer to understand the structure of the code. b0860196f4 Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for its appearance. b0860196f4

Braille It can be read either on embossed paper or by using refreshable braille displays that connect to computers and smartphone devices. For example, chapter 21 of the Unicode standard uses the word "raised" Braille (BRAYL; French: [bʁaj]) is a tactile writing system used by blind or visually impaired people. context of text are valid, and they are usually distinguished purely by context. Braille can be written using a slate and stylus, a braille writer, an electronic braille notetaker or with the use of a computer connected to a braille embosser. For blind readers, braille is an independent writing system, rather than a code of printed orthography b0860196f4

Major processing tasks in an NLP system include: speech recognition, text classification, natural language understanding, and natural language generation. b0860196f4 The most common syntax for here documents, originating in Unix shells... b0860196f4 One of the earliest instances of the use of the "monkey metaphor" is that of French mathematician Émile Borel in 1913, but the first instance may have been even earlier... b0860196f4

Infinite monkey theorem applies if we replace one monkey typing n consecutive blocks of text with n monkeys each typing one block (simultaneously and independently). More precisely, under the assumption of independence and randomness of each keystroke, the monkey would almost surely type every possible finite text an infinite number of times. The theorem can be generalized to state that any infinite sequence of independent events whose probabilities are uniformly bounded below by a positive number will almost surely have infinitely many occurrences. In this case The infinite monkey theorem states that a monkey hitting keys independently and at random on a typewriter keyboard for an infinite amount of time will almost surely type any given text, including the complete works of William Shakespeare b0860196f4

All of the book-bound manuscripts in the library are identified in its Codex Laurentianus. The library conserves the Littera Florentina, the Vergilius Mediceus, the Nahuatl Florentine Codex, the Rabula Gospels, the Codex Amiatinus, the Squarcialupi Codex, and the fragmentary Erinna papyrus that contains part of her Distaff. b0860196f4

Indentation style below are equally acceptable to the compiler: braceless = do text <- getContents let firstWord = head \$ words text bigWord = map toUpper firstWord putStrLn In computer programming, indentation style is a convention or style, governing the indentation of lines of source code. An indentation style generally specifies a consistent number of whitespace characters before each line of a block, so that the lines of code appear to be related, and dictates whether to use spaces or tabs as the indentation character b0860196f4

HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes, and other items. HTML elements are delineated by tags, written using angle brackets. Tags such as and <input> directly introduce content into the page. Other tags such as <p> and its corresponding closing tag </p> surround and provide information about document text and may include sub-element tags. Browsers do not display the HTML tags, but use them to... b0860196f4 If the identity document is a plastic card it is called an identity card (abbreviated as IC or ID card). When the identity document incorporates a photographic portrait, it is called a photo ID. In some countries, identity documents may be compulsory to have or carry. b0860196f4 Indentation can clarify the separation between the code executed based on control flow. b0860196f4

Here document The term is also used for a form of multiline string literals that use similar syntax, preserving line breaks and other whitespace (including indentation) in the text. In computing, a here document (here-document, here-text, heredoc, hereis, here-string or here-script) is a file literal or input stream literal: it is In computing, a here document (here-document, here-text, heredoc, hereis, here-string or here-script) is a file literal or input stream literal: it is a section of a source code file that is treated as if it were a separate file b0860196f4

HTML Browsers do not display the HTML tags Hypertext Markup Language (HTML) is the standard markup language for documents designed to be displayed in a web browser. corresponding closing tag </p> surround and provide information about document text and may include sub-element tags. It defines the content and structure of web content. It is often assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript b0860196f4

This article focuses on curly-bracket languages (that delimit blocks... b0860196f4

Letter case This only works because the letters of upper and lower cases are spaced out equally. g. The two case variants are alternative representations of the same letter: they have the same name and pronunciation and are typically treated identically when sorting in alphabetical order. , {A, a} {G, g} {F, f}). The writing systems that distinguish between the upper- and lowercase have two parallel sets of letters: each in the majuscule set has a counterpart in the minuscule set. Some counterpart letters have the same shape, and differ only in size (e. In ASCII they are consecutive, whereas with EBCDIC they are not; Letter case is the distinction between the letters that are in larger uppercase or capitals (more formally majuscule) and smaller lowercase (more formally minuscule) in the written representation of certain languages. {C, c} {S, s} {O, o}), but for others the shapes are different (e. g b0860196f4

Here documents can be treated either as files or strings. Some shells treat them as a format string literal, allowing variable substitution and command substitution inside the literal. b0860196f4 == Overview == b0860196f4 == Principles == b0860196f4 Braille is named after its creator, Louis Braille, a Frenchman who lost his sight as a result of a childhood accident. In 1824, at the age of fifteen, he developed the braille code based on the French alphabet as an improvement on night writing. He published his system, which subsequently included musical notation, in 1829. The second revision, published in 1837, was the first binary form of writing developed in the modern era. b0860196f4 Structured languages, such as Python and occam, use indentation to determine the structure instead of using braces or keywords; this is termed the off-side rule. In such languages, indentation is meaningful to the language processor (such as compiler or interpreter). A programmer must conform to the language's indentation rules although may be free to choose indentation size. b0860196f4 In the absence of an explicit identity document, other documents such as driver's license may be accepted in many countries for identity verification. Some countries do not accept driver's licenses for identification, often because in those countries they do not expire as documents and can be old or easily forged. Most countries accept passports as a form of identification... b0860196f4

Markov chain processes can also be used to generate superficially real-looking text given a sample document. Markov processes are used in a variety of recreational "parody In probability theory and statistics, a Markov chain or Markov process is a stochastic process describing a sequence of possible events in which the probability of each event depends only on the state attained in the previous event. Markov processes are named in honor of the Russian mathematician Andrey Markov. A countably infinite sequence, in which the chain moves state at discrete time steps, gives a discrete-time Markov chain (DTMC). A continuous-time process is called a continuous-time Markov chain (CTMC) b0860196f4

Natural language processing NLP is also related to information retrieval, knowledge representation, computational linguistics, and linguistics more broadly. NLP is a subfield of computer science and is closely associated with artificial intelligence. Where RMM is the relative measure of meaning token is any block of text, sentence, phrase or word N is the number of tokens being analyzed PMM is the probable Natural language processing (NLP) is the processing of natural language information by a computer b0860196f4

Identity document An identity document (abbreviated as ID) is a document proving a person's identity. If the identity document is a plastic card it is called an identity An identity document (abbreviated as ID) is a document proving a person's identity b0860196f4

== Architecture == b0860196f4 == History == b0860196f4 The adjectives Markovian and Markov are used to describe something that is related to a Markov process. b0860196f4

Laurentian Library It contains the manuscripts and books belonging to the private library of the Medici family. serving as desks for the benches behind them. The desks are lit by the evenly spaced windows along the wall. Built in a cloister of the Medicean Basilica di San Lorenzo di Firenze under the patronage of the Medici pope Clement VII, the library was built to emphasize that the Medici were no longer just merchants but members of intelligent and ecclesiastical society. The windows are framed by pilasters, forming a system The Laurentian Library (Biblioteca Medicea Laurenziana or BML) is a historic library in Florence, Italy, containing more than 11,000 manuscripts and 4,500 early printed books. The library building is renowned for its architecture that was designed by Michelangelo and is an example of Mannerism b0860196f4

Braille characters are formed using a combination of six raised dots arranged in a 3×2 matrix, called the braille cell. The number and arrangement of these dots distinguishes one character from another. Since the various braille alphabets originated as transcription... b0860196f4 The Laurentian Library was commissioned in 1523 and construction began in 1525; however, when Michelangelo left Florence in 1534, only the walls of the reading room were complete. It was then continued by Tribolo... b0860196f4 In this context, "almost surely" is a mathematical term meaning the event happens with probability 1, and the "monkey" is not an actual monkey, but a metaphor for an abstract device that produces an endless random sequence of letters and symbols. Variants of the theorem include multiple and even infinitely many independent typists, and the target text varies between an entire library and a single sentence. b0860196f4 Markov chains have many applications as statistical models of real-world processes. They provide the basis for general stochastic simulation methods known as Markov chain Monte Carlo, which are used for simulating sampling from complex probability distributions, and have found application in areas including Bayesian statistics, biology, chemistry, economics, finance, information theory, physics, signal processing, and speech processing. b0860196f4 == Overview == b0860196f4 Letter case is generally applied

in a mixed-case fashion, with both upper and lowercase letters appearing in a given piece of text for legibility. The choice of case is often denoted by the grammar of a language or by the conventions of a particular discipline. In orthography, the uppercase is reserved for special purposes, such as the first letter of a sentence or of a proper noun (called capitalisation, or capitalised words), which makes lowercase... b0860196f4 Here documents originate in the Unix shell, and are found in the Bourne shell since 1979, and most subsequent shells. Here document-style string literals are found in various high-level languages, notably the Perl programming language (syntax inspired by Unix shell) and languages influenced by Perl, such as PHP and Ruby. JavaScript also supports this functionality via template literals, a feature added in its 6th revision (ES6). Other high-level languages such as Python, Julia and Tcl have other facilities for multiline strings. b0860196f4 The identity document is used to connect a person to information about the person, often in a database. The connection between the identity document and database is based on personal information present on the document, such as the bearer's full name, birth date, address, an identification number, card number, gender, citizenship and more. A unique national identification number is the most secure way, but some countries lack such numbers or do not show them on identity documents. b0860196f4
