== Signs and symptoms == 0028b9475e KIR2DL1 is an important receptor that is usually found on Natural Killer Cells (NK Cells). This receptor’s job is to send inhibitory signals. This means that the receptor will communicate with a cell and tell it to stop what it is doing when it is not needed. This usually happens when a cell is healthy and does not need NK cells to release toxic proteins to kill that healthy cell. This receptor specifically recognizes HLA-C2 molecules on these healthy cells, which are just proteins that help receptors know they are a healthy cell. KIR2DL1 is important because it helps our immune system stay healthy. Our KIR2DL1 receptors are needed to tell our body and other cells what needs to be killed and what is important to stay because it is healthy for us. Without our KIR2DL1 receptors identifying the bad, the bad cells might start attacking our bodies without the NK cells even knowing they had a job to do. As well as without our KIR2DL1 receptors identifying the good our bodies would just start attacking all the good cells all the time. We need these receptors to make everything else work... 0028b9475e The signs and symptoms of infection with feline leukemia virus are quite varied and include loss of appetite, poor coat condition, anisocoria (uneven pupils), infections of the skin, bladder, and respiratory tract, oral disease, seizures, lymphadenopathy (swollen lymph nodes), skin lesions, fatigue, fever, weight loss, stomatitis, gingivitis, litter box avoidance, pancytopenia, recurring bacterial and viral illnesses, anemia, diarrhea and jaundice. 0028b9475e Wilson’s hunting companion is a former leukemia patient, Tucker, who credits Wilson with saving his life five years earlier. He wants to reward "Jim" in various ways (such as taking Wilson hunting) for saving his life.
