Nipple piercing It can be pierced at any angle but is usually done horizontally or, less often, vertically. There is an increased A nipple piercing is a type of body piercing, centered usually at the base of the nipple. ring, but typically, a nipple piercing will take at least six months to a year for women or two to four months for men to heal fully. It is also possible to place multiple piercings on top of one another 2b5119e94d

The piercing can cause nerve damage and may leak or secrete lymph fluid, which has a saliva-like texture and can create an unpleasant odor. An alternative is microdermal implants, placed in the intended dimple location. This method avoids drawbacks of full cheek piercings. Though microdermals do have a slightly larger chance to leave a scar than a piercing, they will heal eventually and be almost unnoticeable. The rate of infection is also lower in the long run. Because the piercing does not penetrate the cheek completely, there is little to no chance of tooth or gum damage. Microdermals are like a 'one hole' piercing, where the 'foot' of the jewelry sits below the skin and the decorative jewel or flat disc is above the skin. 2b5119e94d Ear piercing and nose piercing have been particularly widespread and are well represented in historical records and among grave goods. The oldest mummified remains ever discovered had earrings, attesting to the existence of the practice more than 5,000 years ago. Nose piercing is documented as far back as 1500 BCE.
