Brown recluse spiders are usually between 6 and 20 millimetres (0.24 and 0.79 in), but may grow larger. While typically light to medium brown, they range in color from whitish to dark brown or blackish gray. The cephalothorax and abdomen are not necessarily the same color. These spiders usually have markings on the dorsal side of their cephalothorax, with a black line coming from it that looks like a violin with the neck of the violin pointing to the rear of the spider, resulting in the nicknames fiddleback spider, brown fiddler, or violin spider. 1b8a27fa15

Arthropod bites and stings While most cases cause self-limited irritation, medically relevant complications include envenomation, allergic reactions, and transmission of vector-borne diseases. Stings containing venom are more likely Many species of arthropods (insects, arachnids, millipedes and centipedes) can bite or sting human beings. These bites and stings generally occur as a defense mechanism or during normal arthropod feeding. Many arthropods bite or sting in order to immobilize their prey or deter potential predators as a defense mechanism 1b8a27fa15

In the original version of the story, Eddie Brock is a journalist who publicly exposes the identity of a man he believes is a serial killer, the Sin-Eater, only to find his reputation ruined when Spider-Man captures the real killer. Disgraced and suicidal with a growing irrational hatred for Spider-Man, Eddie comes into contact with an alien symbiote that had been rejected by Peter Parker. The symbiote bonds with him and they become Venom, together seeking out revenge against their mutual enemy. Though... 1b8a27fa15 Flash Thompson is a star high school football player, who mercilessly bullies his high school classmate Peter Parker, but greatly admires Spider-Man, an irony in which the superhero takes some gratification. In time, they become close friends in college after Flash matures and he later discovers Peter is Spider-Man. After graduation, he joins the United States Army, but becomes haunted by his combat experiences, leading to alcoholism. After losing both of his legs in the Iraq War, Flash Thompson turns into the superhero Agent Venom after being bound to the Venom symbiote, which he controls via drugs, as the protagonist of *Venom* and *Venom: Space Knight* and a member of the Guardians of the Galaxy. After nearly being killed by Red Goblin, Flash recovers using the Anti-Venom symbiote, assuming his current alias of Agent Anti-Venom. 1b8a27fa15 Loxoscelism was first described in the United States in 1879 in Tennessee. Although there are up to 13 different *Loxosceles* species in North America (11 native and two non-native), *Loxosceles reclusa*, also known as the Brown Recluse, Fiddleback, or Violin spider, is the species most often involved in serious envenomation. *L. reclusa* has a limited habitat that includes the Southeast United States. In South America, *L. laeta*, *L. intermedia* (found in Brazil and Argentina), and *L. gaucho* (Brazil) are the three species most often reported to cause necrotic bites. 1b8a27fa15 Symptoms of a bite depend on the amount of venom injected. A bite of *Latrodectus* may not inject any venom (known as a dry bite), and so no illness occurs. About 75% of "wet" bites will have localized pain and little more. If, however, there is a substantial dose, a bite can cause latrodectism. The main symptoms are generalized muscle pain, stomach cramps, nausea and vomiting. 1b8a27fa15 == Signs and symptoms == 1b8a27fa15

Loxoscelism The area becomes dusky and a shallow open sore forms as the skin around the bite dies (necrosis) Loxoscelism () is a condition occasionally produced by the bite of the recluse spiders (genus *Loxosceles*). As of 2006, it was the only proven type of necrotic arachnidism in humans. While there is no known therapy effective for loxoscelism, there has been research on antibiotics, surgical timing, hyperbaric oxygen, potential antivenoms and vaccines. The area becomes dusky and a shallow open sore forms as the skin around the bite dies (necrosis). produced by the bite of the recluse spiders (genus *Loxosceles*). Because of the number of diseases that may mimic loxoscelism, it is frequently misdiagnosed by physicians 1b8a27fa15

There are several spider species all named black widow: southern black widow spider (*L. mactans*), the European black widow (*L. tredecimguttatus*), Western black widow spider (*L. hesperus*), Northern black widow spider (*L. variolus*). Other *Latrodectus* that cause latrodectism are the Australian redback spider (*L. hasselti*), the New Zealand katipō spider (*L. katipo*) and the South American *Latrodectus corallinus* and *Latrodectus curacaviensis*. Several other members of the genus *Latrodectus* are not commonly associated with latrodectism, including the cosmopolitan brown widow (*L. geometricus*). 1b8a27fa15

Venom (Sony's Spider-Man Universe) Introduced in *Venom* (2018), Venom is depicted as a symbiote who binds with human investigative journalist Eddie Brock after landing on Earth, with the duo subsequently becoming a vigilante jointly known by Venom's name, and later as the Lethal Protector, facing Venom's former team leader, Riot, later Venom's son, Carnage, in combat and as fugitives, Rex Strickland's military squadron and the Xenophages, sent by Knull to obtain the Venom Codex and escape from his prison. As of 2024[update], the character has appeared in four films: *Venom* (2018), *Venom: Venom* is a fictional character portrayed by Tom Hardy, based on the Marvel Comics character of the same name. == Pathophysiology == 1b8a27fa15 As of 2024, the character has appeared in four films: *Venom* (2018), *Venom: Let There Be Carnage* (2021), *Venom: The Last Dance* (2024) and an uncredited cameo appearance in the Marvel Cinematic Universe (MCU) film *Spider-Man: No Way Home* (2021). While Hardy's portrayal of the character in *Venom* was met with a mixed critical reception, the chemistry between Eddie Brock and Venom received praise. 1b8a27fa15 Most spiders do not cause bites that are of importance. For a bite to be significant, substantial envenomation is required. Bites from the widow spiders involve a neurotoxic venom which produces a condition known as latrodectism. Symptoms may include pain which may be at the bite or involve the chest and abdomen, sweating, muscle cramps and vomiting among others. Bites from the recluse spiders cause the condition loxoscelism, in which local necrosis of the surrounding skin and widespread breakdown of red blood cells may occur. Headaches, vomiting and a mild fever may also occur. Other spiders that can cause significant bites include the Australian funnel-web spider and South American wandering spider. 1b8a27fa15
