Life Some of these are harsh environments occupied only by extremophiles. All

life eventually reaches a state of death. Life exists all over the Earth in air, water, and soil, with many ecosystems forming the biosphere. Science Life is the capacity in matter, formed of one or more units called cells, for processes such as cell signaling, homeostasis, metabolism, cell growth, adaptation, response to stimuli, and reproduction. Defining life is further complicated by viruses, which replicate only in host cells, and the possibility of extraterrestrial life, which could be very different from life on Earth. concepts of kingdoms or organisms. The life in a particular ecosystem is called its biota. Evolutionary relations are better represented by new classifications than by the traditional two kingdoms". Many philosophical definitions of living systems have been proposed, such as self-organizing systems 1b0d56752d

== History == 1b0d56752d Life has been studied since ancient times, with theories such as Empedocles's materialism asserting that it was composed of four eternal elements, and Aristotle's hylomorphism asserting that living things have souls and embody both form and matter. Life originated at least 3.5 billion years ago, resulting in a universal common ancestor. This evolved into all the species that exist now, by way of many extinct species, some of which have left traces... 1b0d56752d
