In single transferable voting, the quota acts as an electoral threshold to some degree, and it is possible to achieve it by receiving first-choice votes alone or by a combination of first-choice votes and votes transferred from other candidates based on lesser preferences. It is also a common occurrence in STV to see someone elected with less than the quota. For example, 45% (read as "forty-five percent") is equal to the fraction $45/100$, or 0.45.

Relative change is often used as a quantitative indicator of quality assurance and quality control for repeated measurements where the outcomes are expected to be the same. A special case of percent change (relative change expressed as a percentage) called percent error occurs in measuring situations where the reference value is the accepted or actual value (perhaps theoretically determined) and the value being compared to it is experimentally determined (by measurement). Members of the group call themselves Allah's Five Percenters, which reflects the concept that ten percent of the people in the world are elites and their agents, who know the truth of existence and opt to keep eighty-five percent of the world in ignorance and under their controlling thumb; the remaining five percent are those who know the truth and are determined to enlighten the eighty-five percent.

The book's namesake comes from the scientific confusion over how ordinary matter makes up only four percent of the mass-energy in the universe, with the rest consisting of mysterious dark matter and dark energy that are both invisible and almost impossible to detect. It is due to dark matter that galaxies are able to keep their shape, with the

mass of dark matter creating enough gravitational force to hold the stars that make up a galaxy together. Dark energy, however, is a substance or force responsible for the accelerating expansion of the universe over time. 9d68af8dd4 original: <http://example.com/my file.txt> 9d68af8dd4 == Track listing == 9d68af8dd4

Percentage A percentage is a dimensionless number (pure number), primarily used for expressing proportions, but percent is nonetheless a unit of measurement in its orthography and usage. It is often denoted using the percent sign (%), although the abbreviations pct. , pct, and sometimes pc are also used. Percent-encoding Percent-encoding, also known as URL encoding, is a method to encode arbitrary data in a uniform resource identifier (URI) using only the US-ASCII characters legal within a URI. Percent-encoding is used to ensure special characters do not interfere with the URI's structure and interpretation. Special characters are replaced with a percent sign (%) followed by two hexadecimal digits representing the character's byte value. For example, a space is commonly encoded as %20: 9d68af8dd4
