The Cleveland Clinic recommends that pads be used instead of tampons to absorb the fluid as materials should not be inserted in the vagina soon after childbirth. 2e7bfa1f15

== Systematics == 2e7bfa1f15 The fruit bodies, or mushrooms, of *M. rotula* are characterized by their whitish, thin, and membranous caps up to 2 cm (3/4 in) wide that are sunken in the center, and pleated with scalloped margins. The slender and wiry black hollow stems measure up to 8 cm (3 in) long by 1.5 mm (1/16 in) thick. On the underside of the caps are widely spaced white gills that are attached to a collar encircling the stem. The

mushrooms grow in groups or clusters on decaying wood such as fallen twigs and sticks, moss-covered logs, and stumps. 2e7bfa1f15 Leukorrhea can be confirmed by finding >10 WBC per high-power field under a microscope when examining vaginal fluid. 2e7bfa1f15 The word leukorrhea comes from Greek λευκός (leukós, "white") + ροία (rhoía, "flow, flux"). In Latin leukorrhea is fluor albus (fluor, "flow" & albus, "white"). 2e7bfa1f15 Glazing renders earthenware impermeable to water, sealing the inherent porosity of earthenware. It also gives a tougher surface. Glaze is also used on stoneware and porcelain. In addition to their functionality, glazes can form a variety of surface finishes, including degrees of glossy or matte finish and color. Glazes may also enhance the underlying design or texture either unmodified or inscribed, carved or painted. 2e7bfa1f15

which include whitish or yellow stripes on the face and thorax. Researchers have conducted a multitude of studies analyzing the changes that occur in the colony during reproductive diapause and what happens during the provisioning and oviposition process or POP. Like other species in Meliponini *Plebeia remota* is a species of stingless bee that is in the family Apidae and tribe Meliponini. *remota* may have a different morphology and exhibit different behaviors. The bee's diet consists of nectar and pollen that are collected intensely from a few sources. Depending on the region, P 2e7bfa1f15

Most pottery produced in recent centuries has been glazed, other than pieces in bisque porcelain. Tiles are often glazed on the surface face, and modern architectural terracotta is often glazed. Glazed brick is also common. Sanitaryware is invariably glazed, as are many ceramics used in industry, for example ceramic insulators for overhead power lines. 2e7bfa1f15 == Taxonomy and phylogeny == 2e7bfa1f15

Plasma televisions were the first large (over 32 inches/81 cm diagonal) flat-panel displays to be released to the public. The UV light then strikes phosphor coatings on the inside of the cells, causing them to emit visible light in red, green, or blue. The Panaplex display, generically referred to as a gas-discharge or gas-plasma display, uses the same technology as later plasma video A plasma display panel (PDP) is a type of flat-panel display that uses small cells containing plasma (ionized gas) to produce an image 2e7bfa1f15

Vaginal discharge is normal, and causes of change in discharge include infection, malignancy, and hormonal changes. It sometimes occurs before an adolescent female has her first period, and is considered a sign of puberty. 2e7bfa1f15 It progresses through three stages: 2e7bfa1f15 This extremely rare mushroom is notable for its unusual appearance and disjunct

distribution; it is found only in select locales in Texas, Oklahoma, Japan, and Taiwan. The fruit body, which grows on the stumps or dead roots of cedar elms (in Texas) or dead oaks (in Japan), somewhat resembles a dark brown or black cigar before it splits open radially into a starlike arrangement of four to seven leathery rays. The interior surface of the fruit body bears the spore-bearing tissue known as the hymenium, and is colored white to brown, depending on its age. The fruit body opening can be accompanied by a distinct hissing sound and the release of a smoky cloud of spores. 2e7bfa1f15

== Etymology == 2e7bfa1f15 Ash glaze, traditionally important in East Asia, simply made from wood or plant ash, which contains potash and lime. 2e7bfa1f15 There are many causes of leukorrhea, the usual one being estrogen imbalance. The amount of discharge may increase due to vaginal infection, and it may disappear and reappear from time to time. This discharge can keep occurring for years, in which case it becomes more yellow and strong-smelling. It is usually a non-pathological symptom secondary to inflammatory conditions of the vagina or cervix. 2e7bfa1f15 Plasma display technology was invented in the 1960s at the University of Illinois and were later made for niche use in luxurious monochrome computer monitors and terminals, before vanishing due to affordable color thin-film transistor liquid crystal displays (TFT LCDs). Planar neon plasma displays like Burroughs's Panaplex were also in use for a short while in handheld electronics like calculators and multimeters before being squeezed out by liquid-crystal display (LCD), vacuum fluorescent display (VFD) and light-emitting diode (LED) during the 1980s.
