2022–2023 mpox outbreak Subsequently, cases have been reported from many countries and regions. El País (in Spanish) In May 2022, the World Health Organization (WHO) made an emergency announcement of the existence of a multi-country outbreak of mpox, a viral disease then commonly known as "monkeypox". The initial cluster of cases was found in the United Kingdom, where the first case was detected in London on 6 May 2022 in a patient with a recent travel history from Nigeria where the disease has been endemic. (19 May 2022). On 16 May, the UK Health Security Agency (UKHSA) confirmed four new cases with no link to travel to a country where mpox is endemic. The disease had been circulating and evolving in human hosts over several years before the outbreak and was caused by the clade IIb variant of the virus. "España prepara la compra de miles de vacunas contra la viruela tradicional para hacer frente al brote del virus del mono". The outbreak marked the first time mpox had spread widely outside Central and West Africa 04ddb03032

2023–2026 mpox epidemic ". 24 August 2024. Archived from An epidemic of a new variant of clade I mpox (formerly known as monkeypox), called clade 1b, began in Central Africa at least as early as September 2023. Retrieved 22 August 2024. 2024. "Confirmaron un caso autóctono de viruela del mono en Argentina". According to the European CDC: "The size of these outbreaks could be larger than reported due to under-ascertainment and under-reporting. As of September 2024, more than 29,000 cases have been reported, with over 800 fatalities (~3% fatality rate), nearly all in the Democratic Republic of the Congo. Infobae (in Spanish) 04ddb03032

In the beginning of May 2022, a case of mpox was reported in a British resident who had travelled to Lagos and Delta State in Nigeria, in areas where mpox is considered to be an endemic disease. The person developed a rash on 29 April while in Nigeria and flew back to the United Kingdom, arriving on 4 May, and presented to hospital later the same day. Mpox infection was immediately suspected, and the

patient was hospitalised at Guy's Hospital and isolated, then tested positive for the virus on 6 May. 04ddb03032
