 Salad Island! takes place on an island inhabited exclusively by fruit. The
 residents enjoy their own tropical paradise without a care in the world; they
 must share their peaceful utopia with Coconut Fred, a whimsical, blissfully
 foolish coconut with the ability to materialize anything he thinks about. The plot
 revolves around the adventures of Fred and his friends, as his imagination
 springs to life while his friends struggle to cover up the collateral damage.
 c5b9e75730 Mango c5b9e75730 Cashew c5b9e75730 In common language and
 culinary usage, fruit normally means the seed-associated fleshy structures (or
 produce) of plants that are typically sweet (or sour) and edible in the raw state,
 such as apples, bananas, grapes, lemons, oranges, and strawberries. In
 botanical usage, the term fruit includes many structures that are not commonly
 called as such in everyday language, such as nuts, bean pods, corn kernels,
 tomatoes, and wheat grains. c5b9e75730 Coconut milk can also be used to
 produce milk substitutes (sometimes differentiated as "coconut milk
 beverages"); these products are meant for drinking, not cooking. A sweetened,
 processed, coconut milk product from Puerto Rico is also known as cream of

 provides food, fuel, cosmetics, folk medicine, and building materials. The inner
 flesh of the mature fruit forms a regular part of the diets of many people in the
 tropics and subtropics. Coconut endosperm contains a large quantity of a liquid,
 "coconut water". Mature coconuts can be processed for oil and coconut milk
 from the flesh, charcoal from the hard shell, and coir from the fibrous husk.
 Dried coconut flesh is called copra, and the oil and milk derived from it are
 commonly used in cooking and in soaps and cosmetics. Sweet coconut sap can
 be made into drinks or fermented into palm wine or coconut vinegar. The hard
 shells, fibrous husks and long pinnate leaves are used to make products for
 furnishing and decoration. c5b9e75730 The scientific study and the cultivation
 of fruits is called pomology, which divides fruits into groups based on plant
 morphology and anatomy. Some of those groups are pome fruits, which include
 apples and pears, and stone fruits, which include peaches/nectarines, almonds,
 apricots, plums and cherries. c5b9e75730 Coconut oil can be extracted through
 a wet or dry process. More simply (but perhaps less effectively), oil can be
 produced by heating the meat via boiling water, the sun or a slow fire.
 c5b9e75730 Fresh coconuts are typically harvested from the tree while they are
 green. A hole may be bored into the coconut to provide access to the "meat"
 (liquid and pulp). In young coconuts, the liquid and air may be under some
 pressure and may spray slightly when the inner husk is first penetrated.
 Coconuts that have fallen to the ground are susceptible to rot and damage from
 insects or other animals. c5b9e75730 Death by coconut can also occur as
 sudden cardiac death caused by hyperkalemia after consuming moderate to
 large quantities of coconut water, due to its high potassium level. Although rare,
 cases have also been reported of anaphylaxis among patients with a food allergy
 to coconut. c5b9e75730 Elderberry c5b9e75730

Jujube Citrus (orange, lemon, lime, etc.) Fruits are the means by which angiosperms disseminate their seeds. Edible fruits in particular have long propagated using the movements of humans and other animals in a symbiotic relationship that is the means for seed dispersal for the one group and nutrition for the other; humans, and many other animals, have become dependent on fruits as a source of food. Consequently, fruits account for a substantial fraction of the world's agricultural output, and some (such as the apple and the pomegranate) have acquired extensive cultural and symbolic meanings.

Coconut water from young green coconuts is also known specifically as buko juice in Philippine English. c5b9e75730 Following a 1984 study on "Injuries Due to Falling Coconuts", exaggerated claims spread concerning the number of deaths by falling coconuts. Falling coconuts, according to urban legend, kill a few people a year. This legend gained momentum after the 2002 work of a noted expert on shark attacks was characterized as saying that falling coconuts kill 150 people each year worldwide. This statistic has often been contrasted with the number of shark-caused deaths per year, which is around five. c5b9e75730 == Premise == c5b9e75730 Ber (Indian plum) c5b9e75730 Mulberry c5b9e75730
