Oxygen toxicity radical (·OH), which can initiate a damaging chain reaction of lipid peroxidation in the unsaturated lipids within cell membranes. Historically, the central nervous system condition was called the Paul Bert effect, and the pulmonary condition the Lorrain Smith effect, after the researchers who pioneered the discoveries and descriptions in the late 19th century. Severe cases can result in cell damage and death, with effects most often seen in the central nervous system, lungs, and eyes. High concentrations Oxygen toxicity is a condition resulting from the harmful effects of breathing molecular oxygen (O2) at increased partial pressures. Oxygen toxicity is a concern for underwater divers, those on high concentrations of supplemental oxygen, and those undergoing hyperbaric oxygen therapy 07d2dfc161

Asphyxia 8 million cases of unintentional suffocation occurred which resulted in 35,600 deaths. Asphyxia can cause coma or death. Asphyxia causes generalized hypoxia, which affects all the tissues and organs, some more rapidly than others. "Hydrogen peroxide production in leukocytes during cerebral hypoxia and reoxygenation with Asphyxia or asphyxiation is a condition of deficient supply of oxygen to the body which arises from abnormal breathing. S2CID 24825982. Kutzsche S, Ilves P, Kirkeby OJ, Saugstad OD (June 2001). There are many circumstances that can induce asphyxia, all of which are characterized by the inability of a person to acquire sufficient oxygen through breathing for an extended period of time. In 2015, about 9. The word asphyxia is from Ancient Greek α- "without" and σφύξις sphyxis, "squeeze" (throb of heart) 07d2dfc161

Spironolactone In addition, some evidence suggests an association between Spironolactone, sold under the brand name Aldactone among others, is classed as a diuretic medication. heightened risk for gastrointestinal issues such as nausea, vomiting, diarrhea, cramping, and gastritis. Other uses include acne and excessive hair growth in women, low blood potassium that does not improve with supplementation, high blood pressure that is difficult to treat, and early puberty in boys. It is also used to block the effects of testosterone as a part of feminizing hormone therapy. It is also used to reduce risk of disease progression, hospitalization, and death due to some types of heart failure. Spironolactone is usually available in tablets, taken by mouth, though topical forms are also available. It can be used to treat fluid build-up due to liver disease or kidney disease 07d2dfc161

The body is affected in different ways depending on the type of exposure. Central nervous system toxicity is caused by short exposure to high partial pressures of oxygen at greater than atmospheric pressure. Pulmonary and ocular toxicity result from longer exposure to increased oxygen levels at normal pressure. Symptoms may include disorientation, breathing problems, and vision changes such as myopia. Prolonged exposure to above-normal oxygen... 07d2dfc161 2MASS 07d2dfc161
