

Generalized Weakness Icd 10

(H03.0*) Parasitic infestation of eyelid in diseases classified elsewhere 3fbe31efb2 The World Health Organization (WHO) publishes a classification of known diseases and injuries, the International Statistical Classification of Diseases and Related Health Problems, or ICD-10. This list uses that classification. 3fbe31efb2 == Signs and symptoms == 3fbe31efb2 (H04.0) Dacryoadenitis... 3fbe31efb2 As a psychopathological term, the first to publish on neurasthenia was Michigan alienist E. H. Van Deusen of the Kalamazoo asylum in 1869. Also in 1868, New York neurologist George Beard used the term in an article published in the Boston Medical and Surgical Journal to denote a condition with symptoms of fatigue, anxiety, headache, heart palpitations, high blood pressure, neuralgia, and depressed mood. Van Deusen associated the condition with farm wives made sick by isolation and a lack of engaging activity; Beard connected the condition to busy society women and overworked businessmen. 3fbe31efb2 In the 1940s, psychiatrists Paul Hoch and Philip Polatin created the term pseudoneurotic schizophrenia. This mental illness, however, is no longer acknowledged as a clinical entity. In 1972 it went on to be called borderline personality disorder, a term coined by Otto Friedmann Kernberg, which referred to an expansive range of issues. 3fbe31efb2

List of ICD-9 codes 390–459: diseases of the circulatory system shortened version of the seventh chapter of the ICD-9: Diseases of the Circulatory System. Both volumes can be downloaded for free from the website of the World Health Organization. The full chapter can be found This is a shortened version of the seventh chapter of the ICD-9: Diseases of the Circulatory System. Volume 2 is an alphabetical index of Volume 1. The full chapter can be found on pages 215 to 258 of Volume 1, which contains all (sub)categories of the ICD-9. It covers ICD codes 259 to 282. It covers ICD codes 259 to 282 3fbe31efb2

391 Rheumatic fever with heart involvement 3fbe31efb2 Parasitic infestation of eyelid in: 3fbe31efb2 (H02.1) Ectropion 3fbe31efb2 onchocerciasis (B73+) 3fbe31efb2 Involvement of eyelid in: 3fbe31efb2 Treatment includes types of psychotherapy and pharmacological intervention; combined therapy is generally considered most effective. Cognitive behavioral therapy (CBT) and... 3fbe31efb2 == Signs and symptoms == 3fbe31efb2 Involvement of eyelid in impetigo (L01.0+) 3fbe31efb2 yaws (A66.-+) 3fbe31efb2

Myasthenia gravis generally starts with ocular (eye) weakness; it might then progress to a more severe generalized form, characterized by weakness in the extremities or in muscles Myasthenia gravis (MG) is a long-term neuromuscular junction disease that leads to varying degrees of skeletal muscle weakness. The most commonly affected muscles are those of the eyes, face, and swallowing. A small percentage of patients can have an enlarged thymus or rarely a thymoma. It can result in double vision, drooping eyelids, and difficulties in talking and walking. Onset can be sudden 3fbe31efb2

(H02.5) Sty, an acne type infection of the sebaceous glands on or near the eyelid. 3fbe31efb2

Nosophobia phobos, "fear". Nosophobia is listed under hypochondriacal disorders by the ICD-10, which are defined by having a persistent preoccupation with the possibility Nosophobia, also known as disease phobia or illness anxiety disorder, is the irrational fear of contracting a disease, a type of specific phobia. Primary fears of this kind are fear of contracting HIV infection (AIDS phobia or HIV serophobia), pulmonary tuberculosis (phthisiophobia), sexually transmitted infections (syphilophobia or venereophobia), cancer (carcinophobia), heart diseases (cardiophobia), COVID-19 (coronaphobia), and catching the common cold or flu 3fbe31efb2

(H02.3) Blepharochalasis 3fbe31efb2 phthiriasis (B85.3+) 3fbe31efb2 Symptoms must be consistent and ongoing, persisting at least six months for a formal diagnosis. Individuals with GAD often have other disorders including other psychiatric disorders, substance use disorder, or obesity, and may have a history of trauma or family with GAD. Clinicians use screening tools such as the GAD-7 and GAD-2 questionnaires to determine if individuals may have GAD and warrant formal evaluation for the disorder. In addition, screening tools may enable clinicians to evaluate the severity of GAD symptoms. 3fbe31efb2 Congenital fiber-type disproportion can cause contractures as well as lordosis or scoliosis. Approximately 30% of people with this disorder have mild to severe respiratory issues due to weakness of breathing muscles. Some people with these breathing issues need noninvasive mechanical ventilation at night and on occasion during the day. Due to throat muscle weakness, approximately 30% of those affected have difficulty swallowing. Dilated cardiomyopathy is a rare complication of this condition. 3fbe31efb2 tuberculosis (A18.4+) 3fbe31efb2 (H03.8*) Involvement of eyelid in other diseases classified elsewhere 3fbe31efb2 390 Rheumatic fever without mention of heart involvement 3fbe31efb2 Neurasthenia was a diagnosis in the World Health Organization's ICD-10, but deprecated, and thus no more diagnosable, in ICD-11. It also is no longer included as a diagnosis in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental... 3fbe31efb2 == H00-H06 Disorders of eyelid, lacrimal system and orbit == 3fbe31efb2

Eye disease This list uses that classification. (H02. Statistical Classification of Diseases and Related Health Problems, or ICD-10. 2) Lagophthalmos This is a partial list of human eye diseases and disorders. 1) Ectropion (H02 3fbe31efb2

Generalized anxiety disorder Worry often interferes with daily functioning. Generalized anxiety disorder (GAD) is an anxiety disorder characterized by excessive, uncontrollable, and often irrational worry about events or activities Generalized anxiety disorder (GAD) is an anxiety disorder characterized by excessive, uncontrollable, and often irrational worry about events or activities. Individuals with GAD are often, but not necessarily, overly concerned about everyday matters such as health, finances, death, family, relationship concerns, or work difficulties. Symptoms may include excessive worry, restlessness, trouble sleeping, exhaustion, irritability, sweating, and trembling 3fbe31efb2

loiasis (B74.3+) 3fbe31efb2 zoster (B02.3+) 3fbe31efb2 == Signs and symptoms == 3fbe31efb2 (H02.6) Xanthelasma of eyelid 3fbe31efb2 391.9 Rheumatic heart disease, unspec. 3fbe31efb2 (H02.2) Lagophthalmos 3fbe31efb2 == Acute rheumatic fever (390–392) == 3fbe31efb2 392 Rheumatic chorea 3fbe31efb2

Idiopathic chronic fatigue depression, fatigue due to old age, weakness/asthenia, and in the ICD-10, also from fatigue lasting under 6 months. The ICD-11 MG22 Fatigue code is also shared Idiopathic chronic fatigue (ICF) or chronic idiopathic fatigue or insufficient/idiopathic fatigue is a term used for cases of unexplained fatigue that have lasted at least six consecutive months and which do not meet the criteria for myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS). Such fatigue is widely understood to have a profound effect on the lives of patients who experience it 3fbe31efb2

(H03.1*) Involvement of eyelid in other infectious diseases classified elsewhere 3fbe31efb2 Pseudoneurotic schizophrenia is in the Russian adapted version of the ICD-10 (code F21.3). It is also in ICD-10 listed as a schizotypal disorder. 3fbe31efb2 The diagnosis of acquired idiopathic generalized anhidrosis is made by ruling out other causes of anhidrosis and clinical criteria. Acquired idiopathic generalized anhidrosis is classified into 3 subgroups: idiopathic pure sudomotor failure (IPSF), sweat gland failure (SGF), and sudomotor neuropathy, with each subgroup presenting a different pathogenesis. 3fbe31efb2 When exposed to heat stimuli like high temperatures, high humidity, or physical activity, patients with AIGA are unable to sweat appropriately. Typically, anhidrosis and hypohidrosis are distributed symmetrically across the trunk. It is uncommon for the palms, soles, or axillae to be afflicted... 3fbe31efb2 Dermatitis of eyelid due to Demodex species (B88.0+) 3fbe31efb2

Pseudoneurotic schizophrenia Patients generally display salient anxiety symptoms that disguise an underlying psychotic disorder. schizophrenia is in the Russian adapted version of the ICD-10 (code F21. The diagnosis of pseudoneurotic Pseudoneurotic schizophrenia is a postulated mental disorder categorized by the presence of two or more symptoms of mental illness such as anxiety, hysteria, and phobic or obsessive-compulsive neuroses. It is also in ICD-10 listed as a schizotypal disorder. It is often acknowledged as a personality disorder. 3) 3fbe31efb2

== Definition == 3fbe31efb2 == Signs and symptoms == 3fbe31efb2 leprosy (A30.-+) 3fbe31efb2 leishmaniasis (B55.-+) 3fbe31efb2 molluscum contagiosum (B08.1+) 3fbe31efb2 Other symptoms include congenital nonprogressive hypotonia and weakness, kyphoscoliosis, high-arched palate, dislocated hips, short stature, and feet deformities. 3fbe31efb2 The diagnosis of pseudoneurotic schizophrenia can be made with clinical observation and by various psychiatric exams by a mental health professional and by the patient's explanation of his or her experiences. A patient must identify with at least two of these symptoms in order to be distinguished as a pseudoneurotic schizophrenic. The... 3fbe31efb2 The word nosophobia comes from the Greek νόσος nosos for "disease" and φόβος, phobos, "fear". 3fbe31efb2 herpesviral (herpes simplex) infection (B00.5+) 3fbe31efb2

Congenital fiber type disproportion Patients will occasionally Congenital fiber type disproportion (CFTD) is an inherited form of myopathy with small type 1 muscle fibers that may occur in a number of neurological disorders. While the exact genetics is unclear, there is an association with mutations in the genes TPM3, ACTA1 and SELENON. ensure proper nutrition, some patients with severe dysphagia and generalized weakness need to be fed through a gastrostomy tube. It is a rare condition. It has a relatively good outcome and follows a stable course 3fbe31efb2

(H02.4) Ptosis 3fbe31efb2 Myasthenia gravis is an autoimmune disease of the neuromuscular junction which results from antibodies that block or destroy nicotinic acetylcholine receptors (AChR) at the junction between the nerve and muscle. This prevents nerve impulses from triggering muscle contractions. Most cases are due to immunoglobulin G1 (IgG1) and IgG3 antibodies that attack AChR in the postsynaptic membrane, causing complement-mediated damage and muscle weakness. Rarely, an inherited genetic defect in the neuromuscular junction results in a similar condition known as congenital myasthenia. Babies of mothers with myasthenia may have symptoms during their first few months of life, known as neonatal myasthenia or more specifically transient neonatal myasthenia gravis. Diagnosis can be supported by blood tests for... 3fbe31efb2 Treatment includes corticosteroid therapy. Acquired idiopathic generalized anhidrosis is considered to be rare but the exact prevalence is unknown. It is more common in males than females and usually manifests during the second and fourth decades of life. 3fbe31efb2 Nosophobia is listed under hypochondriacal disorders by the ICD-10, which are defined by having a persistent preoccupation with the possibility of having at least one serious and progressive physical disorders. Nosophobia is described as unfounded. Medical examination and reassurance is often sought, but may also be avoided. Avoidance of internal and external phobic stimuli is present. One case study describes a woman with a fear of heart disease (cardiophobia) who avoided people she thought were at risk of heart attacks and avoided food containing cholesterol. There are sometimes checking behaviors, such as... 3fbe31efb2

Acquired idiopathic generalized anhidrosis Acquired idiopathic generalized anhidrosis (AIGA) is characterized by generalized absence of sweating without other autonomic and neurologic dysfunction Acquired idiopathic generalized anhidrosis (AIGA) is characterized by generalized absence of sweating without other autonomic and neurologic dysfunction. Other symptoms include facial flushing, headaches, disorientation, lassitude, hyperthermia, weakness, and palpitations 3fbe31efb2

A 1994 definition of ICF was a physical medical condition of unknown origin, persisting or relapsing for a minimum of six consecutive months, where ME/CFS symptoms are not met. 3fbe31efb2

Neurasthenia It became a major diagnosis in North America during the late nineteenth and early twentieth centuries after neurologist George Miller Beard reintroduced the concept in 1869. diagnosis in the World Health Organization's ICD-10, but deprecated, and thus no more diagnosable, in ICD-11. It also is no longer included as a diagnosis Neurasthenia (from Ancient Greek νεῦρον (neuron) 'nerve' and ἀσθενής (asthenés) 'weak') is a term that was first used as early as 1829 for a mechanical weakness of the nerves 3fbe31efb2
