

Inner Thigh Aching Pain

== A == 120470bf3f Abdominal external oblique muscle - The largest, and outermost, of the three flat muscles of the lateral anterior abdominal wall. 120470bf3f Abdominal internal oblique muscle - A muscle of the abdominal wall, which lies below the external oblique and just above the transverse abdominal muscles. 120470bf3f

Massage In the United States, these individuals are often referred to as "massage therapists. In English-speaking European countries, traditionally a person professionally Massage is the rubbing or kneading of the body's soft tissues. Massage techniques are commonly applied with hands, fingers, elbows, knees, forearms, feet, or a device. In English-speaking European countries, traditionally a person professionally trained to give massages is known by the gendered French loanwords masseur (male) or masseuse (female). The purpose of massage is generally for the treatment of body stress or pain. The purpose of massage is generally for the treatment of body stress or pain. ". " In some provinces of Canada, they are called "registered massage therapists 120470bf3f

These cysts are often detected incidentally during MRI or CT scans for other medical conditions. They are also observed using magnetic resonance neurography with communicating subarachnoid... 120470bf3f In professional settings, clients are treated while lying on a massage table, sitting in a massage chair, or lying on a mat on the floor. There are many different modalities in the massage industry, including (but not limited to): deep tissue, manual lymphatic drainage, medical, sports, structural integration, Swedish, Thai and trigger point. 120470bf3f Accommodation - the process by which the eye focuses on an object. 120470bf3f

Dupuytren's contracture It is named after Guillaume Dupuytren, who first described the underlying mechanism of action, followed by the first successful operation in 1831 and publication of the results in The Lancet in 1834. longer be fully straightened. The ring finger followed by the little and middle Dupuytren's contracture (also called Dupuytren's disease, Morbus Dupuytren, Palmar fibromatosis and historically as Viking disease or Celtic hand) is a condition in which one or more fingers become permanently bent in a flexed position. The condition can interfere with activities such as preparing food, writing, putting the hand in a tight pocket, putting on gloves, or shaking hands. It can affect one or both hands. While typically not painful, some aching or itching, or pain, may be present. While typically not painful, some aching or itching, or pain, may be present. The ring finger followed by the little and middle fingers are most commonly affected. It usually begins as small, hard nodules just under the skin of the palm, then worsens over time until the fingers can no longer be fully straightened 120470bf3f

Pudendal neuralgia refers to neuropathic pain along the course of the pudendal nerve and in its distribution. This term is often used interchangeably with pudendal nerve entrapment. However, it has been suggested that the presence of symptoms of pudendal neuralgia alone should not be used to diagnose pudendal nerve entrapment. That is because it is possible to have all the symptoms of pudendal nerve entrapment, as per the diagnostic criteria specified at Nantes in 2006, without actually having an entrapped pudendal nerve. 120470bf3f

Inguinal hernia surgery symptoms can include pain around the groin, an increase in the size of the bulge over time, pain while lifting, and a dull aching sensation. In occult Inguinal hernia surgery is an operation to repair a weakness in the abdominal wall that abnormally allows abdominal contents to slip into a narrow tube called the inguinal canal in the groin region 120470bf3f

Prevention is through public health measures such as not handling dead... 120470bf3f Aarskog-Scott syndrome - (AAS) A rare, inherited (X-linked) disease characterized by short stature, facial abnormalities, skeletal and genital anomalies. 120470bf3f The causes of Dupuytren's contracture are not completely understood. The disease is driven by over-activation of fibroblasts and myofibroblasts in response to signaling molecules including IL-1 beta, TGF-beta, EGF, and CTGF, leading to inappropriately increased formation... 120470bf3f

Bubonic plague Acral necrosis, the dark discoloration of skin, is another symptom. One to seven days after exposure to the bacteria, flu-like symptoms develop. Occasionally, swollen lymph nodes, known as "buboes", may break open. These symptoms include fever, headaches, and vomiting, as well as swollen and painful lymph nodes occurring in the area closest to where the bacteria entered the skin. breathing, continuous vomiting of blood (hematemesis), aching limbs, coughing, and extreme pain caused by the decay or decomposition of the skin while Bubonic plague is one of three types of plague caused by the bacterium Yersinia pestis 120470bf3f

Abdomen - The part of the body between the chest and pelvis, which contains most of the tubelike organs of the digestive tract, as well as several solid organs. 120470bf3f

Glossary of medicine iliac artery. Femoral This glossary of medicine includes definitions of medical terminology and other terms pertaining to medicine and related fields. Femoral nerve - is a nerve in the thigh that supplies skin on the upper thigh and inner leg, and the muscles that extend the knee 120470bf3f

The disease is typically spread by direct genital contact with the skin surface or secretions of someone who is infected. This may occur during sex, including anal, oral, and manual sex. Sores are not required for transmission to occur. The risk of spread between a couple is about 7.5% over a year. HSV is classified into two types, HSV-1 and HSV-2. While historically HSV-2 was more common, genital HSV-1 has become more common in the developed world. Diagnosis may occur by testing lesions using either PCR or viral culture or blood tests for specific antibodies. 120470bf3f The evidence regarding massage is generally low to moderate quality,

inconsistent, and limited for long-term or definitive clinical effects. 120470bf3f The three types of plague are the result of the route of infection: bubonic plague, septicemic plague, and pneumonic plague. Bubonic plague is mainly spread by infected fleas from small animals. It may also result from exposure to the body fluids from a dead plague-infected animal. Mammals such as rabbits, hares, and some cat species are susceptible to bubonic plague, and typically die upon contraction. In the bubonic form of plague, the bacteria enter through the skin through a flea bite and travel via the lymphatic vessels to a lymph node, causing it to swell. Diagnosis is made by finding the bacteria in the blood, sputum, or fluid from lymph nodes. 120470bf3f The pain is usually located in the perineum, and is worsened by sitting. Other potential symptoms include genital numbness, sexual dysfunction, bladder dysfunction or bowel dysfunction. Pudendal neuralgia can be caused by many factors including nerve compression or stretching of the nerve. Injuries during childbirth, sports such as cycling, chronic constipation... 120470bf3f Abductor pollicis longus muscle - One of the extrinsic muscles of the hand. Its major function is to abduct the thumb at the wrist. 120470bf3f

Tarlov cyst g. These cysts form as dilations of the nerve root sheath near the dorsal root ganglion, specifically within the perineural space between the endoneurium and perineurium. A defining feature is that the cyst walls contain nerve fibers, which often line the inner cavity of the cyst itself. various techniques. Reported symptoms included pain, paresthesia, numbness (e. , of the penis, thigh, buttocks, rectum, or vagina), urinary incontinence Tarlov cysts, also known as perineural cysts, are cerebrospinal fluid (CSF)-filled lesions that most commonly develop in the sacral region of the spinal canal (S1-S5), and less frequently in the cervical, thoracic, or lumbar spine. This involvement of neural elements distinguishes Tarlov cysts from other extradural meningeal cysts, such as meningeal diverticula, which do not contain nerve fibers 120470bf3f

Abductor pollicis brevis muscle - A muscle in the hand that abducts (straightens) the thumb. 120470bf3f There are two different clusters of hernia: groin and ventral (abdominal) wall. Groin hernia includes femoral, obturator, and inguinal. Inguinal hernia is the most common type of hernia and consist of about 75% of all hernia surgery cases in the US. Inguinal hernia, which results from lower abdominal wall weakness or defect, is more common among men with about 90% of total cases. In the inguinal hernia, fatty tissue or a part of the small intestine gets inserted into the inguinal canal. Other structures that are uncommon but may get stuck in inguinal hernia can be the appendix, caecum, and transverse colon. Hernias can be asymptomatic, incarcerated, or strangled. Incarcerated hernia leads to impairment of intestinal flow, and strangled hernia obstructs blood flow in addition to intestinal flow. 120470bf3f

Pudendal nerve entrapment Sometimes, pain is perceived in the region of the lower abdomen, posterior (back) and inner thigh, or lower back. calf, foot and toes. Pudendal nerve entrapment is an example of nerve compression syndrome. There are several different anatomic locations of potential entrapment (see Anatomy). Hyperesthesia may Pudendal nerve entrapment is an uncommon, chronic pelvic pain condition in which the pudendal nerve (located in the pelvis) is entrapped and compressed 120470bf3f

Back pain The lumbar region is the most commonly affected area. The pain may be characterized as a dull ache, shooting or piercing pain or a burning sensation. An episode of back pain may be acute, subacute or chronic depending on the duration. Back pain (Latin: dorsalgia) is pain felt in the back. It may be classified as neck pain (cervical), middle back pain (thoracic), lower back pain (lumbar) or coccydynia (tailbone or sacral pain) based on the segment affected. It may be classified as neck pain (cervical), middle back pain (thoracic), lower back pain (lumbar) Back pain (Latin: dorsalgia) is pain felt in the back. Discomfort can radiate to the arms and hands as well as the legs or feet, and may include numbness or weakness in the legs and arms 120470bf3f

Genital herpes When symptoms do occur, they typically include small blisters that break open to form painful ulcers. Most people either have no or mild symptoms and thus do not know they are infected. penis, shaft of the penis or other parts of the genital region, on the inner thigh, buttocks, or anus. Once infected further outbreaks may occur but are generally milder. Onset is typically around 4 days after exposure with symptoms lasting up to 4 weeks. Flu-like symptoms, such as fever, aching, or swollen lymph nodes, may also occur. In females, lesions appear on or near the pubis, Genital herpes is a herpes infection of the genitals caused by the herpes simplex virus (HSV) 120470bf3f

The etiology of these cysts is not well understood; some current theories explaining this phenomenon include increased spinal fluid pressure, filling of congenital cysts with one-way valves, and/or inflammation in response to trauma and disease. They are named after an American neurosurgeon Isadore Tarlov, who described them in 1938. 120470bf3f The majority of back pain is nonspecific and idiopathic. Common underlying mechanisms include degenerative or traumatic changes to the discs and facet joints, which can then cause secondary pain in the muscles and nerves and referred pain to the bones, joints and extremities. Diseases and inflammation of the gallbladder, pancreas, aorta and kidneys may also cause referred pain in the back. Tumors of the vertebrae, neural tissues and adjacent structures can also manifest as back pain. 120470bf3f Efforts to prevent infection include not having sex, using condoms, and only having sex with someone who is not infected... 120470bf3f Inguinal hernia can make a small lump in the groin region which can be detected during a physical exam and verified by imaging techniques such as computed tomography (CT). This lump can disappear... 120470bf3f

Foot binding Ping Wang (2000). 37. Feet altered by foot binding were known as lotus feet and the shoes made for them were known as lotus shoes. p. ISBN 978-0-300-07931-9. In late imperial China, bound feet were considered a status symbol and a mark of feminine beauty. Aching for Beauty: Footbinding in China. However, foot binding was a painful practice that limited the mobility of women and resulted in lifelong disabilities. 32- Foot binding (simplified Chinese: 缠足; traditional Chinese: 纏足; pinyin: chánzú), or footbinding, was the Chinese custom of breaking and tightly binding the feet of young girls to change their shape and size. University of Minnesota Press.

Yale University Press. pp 120470bf3f

Abscess – A collection of pus that has built up within the tissue of the body. 120470bf3f Accommodation reflex – a reflex action of the eye, measured as a response to focusing on a near... 120470bf3f The prevalence and practice of foot binding varied over time, by region, and by social class. The practice may have originated among court dancers during the Five Dynasties and Ten Kingdoms period in 10th-century China and gradually became popular among the elite during the Song dynasty, later spreading to lower social classes by the Qing dynasty (1644-1912). Manchu emperors attempted to ban the practice in the 17th century but failed. In some areas, foot binding raised marriage prospects. It has been estimated that by the 19th century 40-50% of all Chinese women may have had bound feet, rising to almost 100% among upper-class Han Chinese women. Frontier ethnic... 120470bf3f Back pain is common; approximately nine of ten adults experience it at some point in their lives, and five in ten working... 120470bf3f
