Foer presents the book as a way for him to decide whether or not his newborn child should eat meat. Foer's son is representative of the generations that are entering a world of industrialized farming, in which the decision to eat meat has many more implications than taste. More often than not, putting meat on our plates comes with immense ramifications not only for the animals involved, but also for the environment, and ourselves; the animals suffer, the environment is damaged, and our health is put into question. Essentially, Foer concludes that the detriments of factory farms outweigh the benefits of taste, which is why he chooses to raise his son... 96b4800535

Puffcorn is commonly known as a ready-to-eat functional breakfast cereal or an extruded functional snack. Some puffcorn is made with oat flour, flaxseed and chia corn. Due to the health benefits, there has been increased interest in developing functional food products containing chia. 96b4800535 The adult European corn borer is about 25 millimetres (0.98 in) long with a 26–30 millimetres (1.0–1.2 in) wingspan. The female is light yellowish brown with dark, irregular, wavy bands across the wings. The male is slightly smaller and darker.

96b4800535 The corn snake is named for the species' regular presence near grain stores, where it preys on mice and rats that eat harvested corn (maize). The Oxford English Dictionary cites this usage as far back as 1675, whilst other sources maintain that the corn snake is so-named because the distinctive, nearly-checkered pattern of the snake's belly scales resembles the kernels of variegated corn.
