DuckDuckGo is an American software company founded by Gabriel Weinberg in 2008 that focuses on Internet privacy. all users of the search engine, including date filtering of results and additional site links

The transition from Live Search to Bing was announced by Microsoft CEO Steve Ballmer on May 28, 2009, at the All Things Digital conference in San Diego, California. The official release followed on June 3, 2009.

Bing introduced several notable features at its inception, such as search suggestions during query input and a list of related searches, known as the "Explore pane". These features leveraged semantic technology from Powerset, a company Microsoft acquired in 2008. Microsoft also struck a deal with Yahoo! that led to Bing powering Yahoo! Search. Google uses its Safe Browsing data to notify webmasters when their websites are compromised by malicious actors and helps them resolve the problem. Google also provides Safe Browsing information to Internet service providers by sending email alerts to autonomous system operators regarding threats hosted on their networks. Swipe gestures: touch screen gestures for moving between email accounts and for managing individual or multiple emails. Gestures reveal icons for marking as read/unread, delete, move to folder or marking as spam

Learning to rank "relevant" or "not relevant") for each item. to model user's satisfaction with search results better than the DCG metric: Expected reciprocal rank (ERR); Yandex's pfound. This order is typically induced by giving a numerical or ordinal score or a binary judgment (e. Training data may, for example, consist of lists of items with some partial order specified between items in each list. g. The goal of

constructing the ranking model is to rank new, unseen lists in a similar way to rankings in the training data. Both of these metrics are Learning to rank (LTR) or machine-learned ranking (MLR) is the application of machine learning, often supervised, semi-supervised or reinforcement learning, in the construction of ranking models for information retrieval and recommender systems

Unlike traditional advertising, which often requires payment regardless of user engagement, PPC allows advertisers to pay only when a measurable interaction occurs, such as a click. This model enables advertisers to evaluate the effectiveness of advertisements and target specific user actions. In May 2010, Yandex launched Yandex... For a search provider, its engine is part of a distributed computing system that can encompass many data centers throughout the world. The speed and accuracy of an engine's response to a query are based on a complex system of indexing that is continuously updated by automated web crawlers. This can include data mining the files and databases stored on web servers, although some content is not accessible to crawlers. Customizable push notifications: Turn off/on by time of day, by email account, by folder or by sender. Hide sender name or subject Data compression which speeds up email delivery decreasing data... == General == General information on webmail providers and products PPC is widely used on major search engines and platforms, including Google Ads, Amazon Advertising, and Microsoft Advertising. Advertisers bid on keywords relevant to their target audience, paying when users click on ads. These ads may be text-based, image-based, or a combination. Some publishers charge a fixed rate per click instead of using a bidding system. == Primary functionality ==
